NEWS IN BRIEF

**Redifon's
56% rise**

KEY-TO-DISC manufacturer Redifon Computers has announced a turnover of £11 million for its 1976-77 financial year which ended on March 31. This is 56 per cent higher than in 1975-76. About 45 per cent came from sales in Eastern Europe where Redifon's strongest markets are Poland and Czechoslovakia (CWI, June 9). Pre-tax profits, at £1,706,000, were 28 per cent up on the previous year.

Sit-in ends

SIT-IN at Plessey's Kirkby, Liverpool, factory has ended following a mass meeting decision last week. A total of 136 people were involved, demanding better redundancy terms, and about 80 of these have shown an interest in vacancies at the company's Edge Lane and Huyton plants.

Prices down

PRICES of Digital Equipment LA-36 DECwriter keyboard/printers sold by Data Dynamics have been reduced to £1,095 for single units and £995 for quantities of 50.

Giro contract

A CONTRACT worth £1.5 million for the supply of personalised stationery to Giro account holders has been won by Rochford-Thompson of Newbury, Berkshire.

Range extended

EXTENDING its Renity range of file management systems up and down, CMC has introduced the Reality-5 for low volume applications and first time users, and the Reality-30 which can be supplied with up to 200 Megabytes of disc storage.

**FINAR for
Financial
Planning**

If you are offering an in-house, time sharing facility you should be considering FINAR — the Financial Analysis and Reporting System. The best place for your Company's planning is on your own machine, where sensitive financial information is most secure and you can...

- Eliminate time-sharing bills
- Provide instant reports for management
- Keep programmers on schedule
- Implement a language that management can use and understand

If you want to put more service into Management Systems than contact Tony Koble at
Aristos
78 GELMINT ROAD, HARROW HA3 7PN : Telephone 01-427 8384

Digico's answer to US-built megaminis

MOVING up market, Digico has announced its answer to the US-built megaminis. Called the MTS16E, the Digico processor can be supplied with up to 2 Mbytes of main memory and can handle a multi-terminal system with up to 32 users.

The MTS16E is upwards compatible with existing Digico minis, including the Micro 16E introduced last year (CW, September 30, 1976), which Digico has renamed the M16E. But the MTS16E incorporates several power boosting hardware differences.

Most important is a hardware memory mapping unit which can provide each terminal user with up to 64K bytes of main core and can switch memory stacks between users in four microseconds. This is part of a three-tier memory management operation involving system, user and terminal slots. Common subroutines and communications protocols are needed in the user slot.

Digico points out that the memory allocation and scheduling system is supported by its standard multi-programming system and is transparent to the user.

Other MTS16E features include additional instructions to handle up to 16 levels of vectored interrupt and a 10 slot multi-programming associative, interactive multi-terminal extended basic is offered for application programming, and can be used more effectively than with other Digico machines. The MTS16E also comes with high speed floating point hardware.

MTS16E system prices range from £20,000 to £100,000, and Digico quotes £600 for each 32K bytes of RAM. Disc storage can be expanded up to 270 Megabytes, and Digico can supply customers with its own Regent display terminal.

The first MTS16E customer is Loughborough University, which is paying about £20,000 for a four-terminal configuration with a 162K byte main memory and 11.2 Megabytes on disc. It will be used in the Department of Library Information Studies.

One of the latest companies to install a Digico MTS16E-based system for commercial data processing is Continental Wine Exporters of Norfolk, which manufacture wine-making kits.

**Decision tables
draft 'inadequate'**

By Stephen Bell

A STANDARDS document on decision tables, published by the British Standards Institution last week, is likely to attract heavy criticism.

Several points of the standard were criticised by decision table experts when it was still in its draft version. Publication of the final version shows that many of the criticised points remain unaltered, or have simply been evaded.

These shortcomings are particularly worrying, the critics contend, since the BSI document is intended as the basis for a projected international standard.

Decision tables are an increasingly widely adopted and convenient method of expressing the logical connection between the replies to a number of questions and the actions to be performed as a consequence of the replies.

While decision tables have been used manually, they have proved particularly appropriate as an expression of the decisions to be taken in a computer program.

The most serious shortcoming in the BSI document, say observers, is a failure to account for unexpected conditions. For example, if a variable should have value A or B, then the table should also include the condition when the variable has neither of the expected values, and an error action should be specified.

This omission, it is claimed, means that the procedure given in the report for generating and checking the possible combinations of conditions becomes unworkable.

A number of procedural points have also been singled out as bad practice; for example, the ambiguous use of the dash. As a result of long practice, this symbol is recognised as meaning that the reply to a question is, in a certain case, immaterial. The BSI standard uses the dash in at least two other roles.

The chairman of the committee which formulated the standard contended that criticisms had been few and "have emerged at a rather late stage," when the draft could not easily be amended.

A possible shortcoming of BSI procedure, however, emerged in his comments. The BSI circulates its draft standards primarily to organisations, so they may not be seen by many individual experts in the field concerned.

The aim of the standard, he added, had been to keep it as general as possible, without "tying it down to a particular package or language."

GAP takes delivery of Series 1

DELIVERY of an IBM Series 1 to CAP UK's offices in Bloomsbury, London, last week emphasised the company's commitment to develop software for the machine (CW, May 26).

The configuration acquired by CAP has 64 Kbytes of memory, a combined disc-diskette unit, a matrix printer, teletype channels — the first example of an IBM-provided connection to a non-IBM device — a visual display terminal and a general-purpose I/O channel for attachment of unusual peripherals.

Most of the initial applications of the IBM minicomputer are expected to be in distributed processing, CAP expects that a large number of its clients, already using IBM mainframes, will be encouraged by the Series 1 launch and the general trend to distributed processing to look seriously at the machine. This would provide CAP with a large potential market.

Initial Series 1 inquiries also show a requirement for unusual peripherals such as badge-readers and colour displays, for the use of non-DP-oriented staff. CAP maintains that it has sufficient experience with device hardware to offer good services in this direction.

CAP intends to produce a number of software products for the Series 1, including an implementation of its MicroCobol and a debugging system, also based on its MicroAde software for microprocessors.

CAP's project manager for Series 1 will be Dr Gill Ringland.

Dr Gill Ringland, project manager for CAP's Series 1 developments.

Gray Research financial results

FINANCIAL results for the second quarter of 1977 from supercomputer manufacturer Gray Research include turnover and net loss figures of \$527,327 and \$634,206, while the figures for the first half of the year were \$1,036,301 and \$1,121,776, respectively. Most of the turnover came from leased system rentals and Gray expects to install two more machines soon.

TERMINAL ASR UNIT

**NCC rule
changes
planned**

AN extraordinary general meeting of members of the National Computing Centre is to be held within the next six months to discuss changes to the Centre's constitution which will increase member representation on the council.

The changes are needed because the NCC's annual grant has now been replaced by contracts for specific projects (CW, March 17). Given this increased government independence, the NCC now believes it is inappropriate to have the Department of Industry nominating half its council members.

The need for constitutional change was discussed last week by the NCC's chairman Professor James Merriman, at the Centre's annual meeting.

Southwark's 2070, with two Mbytes of memory and 800 Kbytes on disc, will be installed in an existing building in October next year. The joint computer centre, which runs a System 4, due to close the following April, Southwark will convert as many financial systems as possible from the System 4.

£60,000 grant

THE Council for Educational Technology is to receive a grant of £60,000 from the Department of Science and Education to provide a general information service on computer assisted learning. Roger Miles, assistant director of the National Development Programme in Computer Assisted Learning, which ends its five-year life in December, is expected to join the CET to run the new service.

**FLIGHT

**Southwark
goes for
a 2970**

ONE of the councils leaving the London Boroughs' Joint Computer Committee, Southwark has ordered a 2970 from ICL. The machine will cost £800,000 a year, compared with the £500,000 which Southwark estimates it would have had to pay to stay in the consortium, but says the bigger system will enable it to run many more systems of a non-financial nature.

The order redresses the balance towards ICL a little, as Bexley and Kensington and Chelsea have ordered IBM 370/138s.

The fourth borough in the consortium, Greenwich, hopes to co-operate with Westminster, using the city council's computers.

Southwark's 2070, with two Mbytes of memory and 800 Kbytes on disc, will be installed in an existing building in October next year. The joint computer centre, which runs a System 4, due to close the following April, Southwark will convert as many financial systems as possible from the System 4.

£60,000 grant

THE Council for Educational Technology is to receive a grant of £60,000 from the Department of Science and Education to provide a general information service on computer assisted learning. Roger Miles, assistant director of the National Development Programme in Computer Assisted Learning, which ends its five-year life in December, is expected to join the CET to run the new service.

**Briefing
France
boosts IC
production**

THE French government is to spend 120 million francs, £14.5 million, a year over the next five years to build up integrated circuit production. The annual figure will be indexed for inflation, and is double what the government has so far spent each year in support of the integrated circuit industry.

A commission has been set up to put the support plan into action, and it is due to report by the end of November on how the money should be shared out.

ICL dispute

TALKS resume next week between ICL and unions in a bid to solve a dispute over a proposed self-financing productivity scheme (CW, August 4). This follows a threat of industrial action by members of APEN, EESA, ASTMS and ACTSS.

Natwest's 3033s

THE National Westminster Bank is to install IBM 3033s at its new London computer centre as replacements for old 360s. The bank would not say how its new system would be met but it is now in negotiation with IBM.

• The 3033 draw, back page.

Phillips chuffed

ORDERS worth over £1 million were won by Philips Data Systems during a 13-city promotional journey by train called "Datatrail". Delegates from over 1,500 businesses attended the demonstrations last month.

B3800 additions

CLOSELY following the two new low-cost B3800s, Burroughs has announced two additions to the B3800 line, the B3804 and the B3805. The first is available for immediate delivery in the US and the second in the first quarter of 1978; no further details are yet available.

Rapid results

THE EEC Council of Ministers has approved the European Space Agency's plan to connect research centres in the UK, France and Germany to CERN in Switzerland, by high-speed satellite data links. That plan will enable physicists in the three countries to get rapid results from experiments carried out at CERN, the Centre for European Research into Nuclear Physics.

Court action

A-US court has been asked by EMI to stop a US firm, Pfizer Medical Systems, from using EMI inventions in the manufacture of computerised medical X-ray scanners. The suit is similar to one filed by EMI against another US firm, Ohio Nuclear. In both cases EMI says it is willing to make its patented inventions available under licence.

IFIP 'revolutionaries' meet in Toronto

THE skyways were empty, the band played Everything Is Coming Up Roses and there was a whiff of revolution in the Toronto air.

Despite a strike by Canadian air traffic controllers, over 2,000 delegates had registered by the time IFIP 77 got under way to the musical accompaniment of the band of the Royal Regiment of Canada. And the revolutionary talk came from speaker after speaker at the opening ceremony who stressed the same themes concerning the impact of information technology as were expressed at the ACM/Computer Weekly conference (CW, July 14).

The Canadian Minister for Science and Technology, J. Hugh Faulkner, for example, spoke of the "irreversible

changes that will be caused by the information technology-based revolution".

The keynote speaker, chairman of the Science Council of Canada, Dr Josef Kates, told the delegates that "you are the revolutionaries who will irrevocably transform today's society and who must communicate to others not only the technical but

Winning post

BERIN GOWAN, a prizewinner in the recent computer security essay competition organised by Intefact and Computer Weekly, has joined Langton Information Systems as a senior consultant.

Gowan has eight years' experience of designing large database systems, planning online information systems and performance measurement and has been working on government database projects. This experience will be put to use at Langton, where he will help incorporate database techniques into structural design systems.

Gowan's essay won a special prize for originality in looking at security from a data item's viewpoint (CW, June 16).

**System X
£20m
contracts
awarded**

DEVELOPMENT contracts worth about £20 million have been awarded to GEC, Plessey and STC for the System X all-electronic telephone switching exchanges for the 1980s.

The formal confirmation of the contracts has yet to be announced, but it is understood that GEC's contract is for the computers to control the exchanges, which will be based on the GEC Mark IBI processor.

Plessey's contract, for the switching systems, could prove the most valuable of the three, while STC will develop the communications and signalling equipment.

System X development contracts worth £50 million were scheduled to have been placed 18 months ago (CW, November 17, 1975), but were delayed as a result of the £306.6 million loss by the Post Office.

A plan for a joint company to be established by GEC, Plessey, STC and the Post Office to manufacture and market System X is being considered in the Post Office.

**Papermill blast ruins
data prep department**

THE data prep department was virtually destroyed and the rest of the computer installation put out of action when a central heating boiler blew up at the Bowater-Scott papermill at Gravesend, Kent, during the early hours of Tuesday.

The only staff on duty were two night shift operators, who escaped unhurt.

About 20 data prep girls work

COMPUTER WEEKLY'S INSIDE NEWS

Risky business

Computer service companies are risky investment prospects. This is the gloomy news from a stock-broking firm which has produced a report on the industry for the City. And the report shows how the market has to be dominated by a few very large companies. Page 3

Bankers' answer

A few weeks ago Focus took a swipe at DP in the UK banking community. His criticisms have been taken up by Charles Reed, director of the Inter-Bank Research Organisation, who points out that the picture is by no means as bleak as Focus seemed to think. Page 4

Take your pick

Buy, lease or hire... that's a question which deserves as serious consideration as the technical merits of different computers. A User Forum survey of mainframe manufacturers helps you choose. Page 11

Five-year plan

The ICL of the future is revealed in the company's five-year plan. And if all goes well the company will double its turnover by 1982, have a processor which is 40 times faster than at present and discs with 20 times the present capacity. Page 12

Report from Malcolm Peltu

changes that will be caused by the information technology-based revolution".

The keynote speaker, chairman of the Science Council of Canada, Dr Josef Kates, told the delegates that "you are the revolutionaries who will irrevocably transform today's society and who must communicate to others not only the technical but

APPALLING DECISION, SAYS MP

**US minis picked
for job centres**

By Keith Jones

A PLAN for Employment Services Agency offices throughout the country to be equipped with US-built minicomputer equipment has been described by Labour MP Eric Munn as "an appalling decision".

The ESA is buying Interdata minis and printers to speed the dissemination of vacancy details among job centres in major metropolitan areas, and Munn has written to Employment Secretary Albert Booth, complaining that the ESA's choice of a foreign supplier is against what he describes as "the good interests and principles of the job creation scheme".

The Interdata kit was selected in preference to Digico minis and Drico and Trend printers, all built in the UK.

Munn has asked Albert Booth to intervene before the US-built equipment goes live. Digico marketing manager Ken Atkinson said, "A contract of this sort in the US or West Germany would definitely have gone to a domestic firm."

Two systems have been ordered so far, one with 70 terminals for the London area and another with 30 for Glasgow.

Liverpool and Newcastle are the next two cities earmarked and the final total could be 12 systems worth about £1 million.

An Interdata spokesman told Computer Weekly that Interdata expects to be awarded contracts for all the systems.

The terminal systems are replacing telex and postal distribution job details. According to Digico, the application is one which it could easily have tackled, especially with its experience in terminal handling and front ending.

The ESA was advised to buy from Interdata rather than Digico by the Central Computer Agency, and Digico has written to CCA director Tony Atkinson, asking for an explanation.

The CCA told Computer Weekly that Digico may get a fuller explanation, but pointed out that its choice of foreign equipment comes within the government's multiple tendering policy.

Digico believes that the CCA may have favoured the choice of the print generated by the Interdata daisy wheel printers compared with the output on matrix units, but thinks that this is an unimportant consideration in an application where high print quality is not essential.

Munn is particularly concerned about the loss of labour intensive printer manufacturing business to a US supplier at a time of serious unemployment.

The configuration bid by Digico for the London system included a Digico Mirror 10L processor, with a 64 Megabyte disc store and an online interface, worth £46,000, 30 Drico 6120 100 cps matrix printers worth £39,000 and 40 KSR Teletype units valued at £40,000.

The Glasgow configuration includes a £30,000 processor, 30 Trend 800 30 cps printer terminals valued at £40,500, and £22,000 worth of Modular Technology Minimodels.

also the social, economic, and even the philosophical implications of your discoveries.

"The technological revolution that we face is proceeding so quickly and affects every aspect of our lives so deeply that those of us who count ourselves among the priesthood bear a tremendous responsibility to ensure that our society is capable of integrating the changes that we know are

coming."

While Dr Dick Tanaka, president of IFIP, suggested that IFIP itself was perhaps reacting too slowly to the growing rate of change in the computer-based society.

"And if IFIP, which has been in the forefront of looking at these problems, is falling behind, what about the rest of the world?"

• Turn to page 4

ing to Digico, the application is one which it could easily have tackled, especially with its experience in terminal handling and front ending.

The CCA told Computer Weekly that Digico may get a fuller explanation, but pointed out that its choice of foreign equipment comes within the government's multiple tendering policy.

Digico believes that the CCA may have favoured the choice of the print generated by the Interdata daisy wheel printers compared with the output on matrix units, but thinks that this is an unimportant consideration in an application where high print quality is not essential.

Munn is particularly concerned about the loss of labour intensive printer manufacturing business to a US supplier at a time of serious unemployment.

The configuration bid by Digico for the London system included a Digico Mirror 10L processor, with a 64 Megabyte disc store and an online interface, worth £46,000, 30 Drico 6120 100 cps matrix printers worth £39,000 and 40 KSR Teletype units valued at £40,000.

The Glasgow configuration includes a £30,000 processor, 30 Trend 800 30 cps printer terminals valued at £40,500, and £22,000 worth of Modular Technology Minimodels.

According to the ESA, the Interdata system in London will be used until 1981, by which time the Capital job matching network, based on Honeywell's Acton data centre, will have been extended to cover all of Greater London (CW, June 23).

**Distributed
Computing
Centralised
Intelligence**

Distributed systems are no longer a concept for tomorrow. For several of Data Logic's clients they are fast becoming a reality. For one leading company we are implementing a network of over twenty minicomputers. For another, a system with ten processors. A third will have four interconnected minis each supporting twelve or more remote terminals.

Each of these solutions was tailor-made to meet a specific need. Process power, local storage, communications links and central facilities were all designed with care for optimum usability at minimum cost.

The clients supplied the crucial knowledge of their business environments. Data Logic supplied the technical skills. Jointly, we provided the ingredient that creative system solutions need: intelligence.

COMPUTERVIEW

Catalyst for agreement on national policy needs

GOVERNMENT policy on the computer industry should be seen as only one aspect of a much broader canvas which should include the effects of information technology on the social, economic and human factors of life.

And existing government policy, even to the computer sector itself, did not exhibit sufficient coherence and awareness of the dangers facing Britain economically, if the country does not gear itself for a new technological lifestyle.

That view was the result of many hours of discussions at Hedsor.

In talking about current government policies, Martin Lam, Under-Secretary at the Department of Industry, said that because there was no imposed order it did not mean that there was no order at all in government policy to the computer industry.

He described the various aspects of existing government policy, which includes bodies such as the Computers, Systems and Electronics Requirement Board, the Science Research Council, and Noddy computer sector working party.

He pinpointed the establishment of ICL, the National Computing Centre and the NEB's Inspec computer services company as milestones in government policy.

He also said that, while most people were calling for "a policy statement," few could agree on what that policy should be.

From the discussions at the conference, however, it became clear that, while there was disagreement on the details of a policy, there was a general consensus on the shape of the overall strategy.

This consensus found a focal point in an eight-point plan presented by consultant Iann Barron (CW, July 14).

The key elements in this plan were that: the policy should be based on a perception of the future, not the past; it should be oriented to the user, not the manufacturer of computers; it should be based on the convergence of computer, telecommunications and semiconductor technologies into a new "information technology"; the impact on social and educa-

Hedsor Workshops 4 Government policy

Discussions at last month's ACM/Computer Weekly conference held at Hedsor Park revolved around one central theme: government policy towards the use and supply of information technology services.

This week, Computerview summarises the weekend discussions on how the government could act to help ensure that computers play a positive role in the country's economic and social life.

national policies must be considered; the future of the Post Office must be integrated into the plan; and the government must play a major role as a user of the technologies.

There was virtually no disagreement on the aspects of policy affecting the world outside the computer industry, and it was stressed over and over that it is futile to consider the computer industry in isolation from the uses of computers and their overlap with other technologies.

At times, delegates to the conference exhibited a despair at the difficulty of ever convincing "the outside world" of the importance of information technology. It was felt that few people in positions of power and influence in private and public organisations were even aware of the questions that had to be answered.

More positively, however, it was felt that, as telecommunications and microprocessors brought computer power closer to the everyday user, there would be a rapidly increasing public awareness of computers.

When it came to policy on the computer industry itself, however, there was far less unanimity of purpose, and sectional interests came to the fore, particularly in discussions on how any government money-cake should be cut.

So no conclusions were reached on the precise nature of government policy to the computer industry, except in the context of Barron's point about the emphasis that should be given to the use of computers.

And once again it was stressed that some coherent policy that related to wider issues should be provided.

The government procurement policy, which was reinforced last

week by an announcement of the continuation of single tendering for large mainframes in central government, was felt by many delegates to fall between too many stools.

As shown by this week's decision by the Department of Employment to choose a US manufactured equipment (front page) it often appears that the government's right hand does not know what its left hand is doing - and even the fingers on the same hand seemed to be acting on their own initiative.

This project also highlights the reasons why a co-ordinated national policy was called for. Otherwise how can one answer

questions such as: Should a government department wishing to assist employment, ensure that contracts it awards improve employment in Britain or should it be free to choose what it regards as the most cost-effective system?

And why should a central government organisation spending, say, about £1 million on a large mainframe, be subject to different policies from a department spending the same money on a multi-mini configuration?

Judging by the widespread response to Computer Weekly's call for action following the Hedsor conference, there are many within the computer industry with the foresight to see that these questions are more than just of perochiel interest.

And, in retrospect, Hedsor is likely to be remembered as a catalyst which brought together the industry to agree that any national policy towards the computer industry should be based primarily on the needs of computer users, ie the whole of society, and not just on the blinkered needs of the suppliers.

Ten years ago...

COMPUTER WEEKLY, AUGUST 10, 1967

THE Ministry of Technology planned to give extra support to the computer industry. The government intended to provide a centralised control, computer-aided design in architecture and engineering, databases, teaching aids and aids to medical diagnosis and records was among the areas designated. A ministry memorandum warned that Britain might be lagging behind Continental countries in the rate at which computers were being installed, as well as modernity and effectiveness of installations.

A prototype of the Ferranti FM 1800B minicomputer, intended for such applications as military aircraft and new applications, was introduced.

According to a study published by Ingersoll Rand Corp in the US, the computer capacity of Europe's top 10 privately-owned companies grew by over 88% during the period 1962-66. A challenge to Elliott's range of process control machines was presented by English Electric's 100 system, still in the development stage. It consisted of a series of modular units designed to work through a standard interface.

Extending the top end of the H200 series, Honeywell introduced the H200, a large multiprogramming system. The first ICT 1807 was installed and operating at the company's Putney headquarters. Bull GE's share were reduced from 80 francs to 30 for a £5 million loss in 1966.

FOCUS

from a distant shore, reflects on the dog days of summer.

NOTHING turns off the computer industry more than the summer break. It's almost total downtime for decisions during the holiday period. The calling of Club Meditearra has very definite priority over the calling of software or printer-ribbon salesmen.

Several weeks before making tracks for Corfu, DPMs are more concerned with organising supplies of suntan lotion and snorkel masks than disc packs or shredders. The only shedding envisaged are inhibitions.

Meanwhile back of the installation, although all may not be joy, operations are in relaxed mode. No longer is tomorrow the target date. Deadlines are more probably next month. The company hierarchy themselves are no doubt occupying sundry villas across Europe and such activities as board meetings or computing policy discussions are not on the agenda.

User departments also make far fewer demands on the computing service. Company salesmen are not reporting back with overflowing order sheets. Very probably they are not reporting back at all, having already headed for the beaches.

For the programming team, life could also be peaceful. Just about the most exciting tasks on hand are long ignored job rewrites. With boundless machine testing time at their disposal, highly concentrated work is not the main worry.

Often the highlight of activity in the computer room is a major refurbishment. Equipment can be freed for comparatively lengthy periods. Servicemen do not have to contend with anxious ops managers who, an hour after work has started on a disc controller, demand how much longer the operation will take.

No doubt all but the most zealous computer salesman and suppliers have got the holiday message. If deals were not clinched by mid-June than that anticipated holiday commission

Service companies 'offer little security'

COMPUTER service companies offer little security to financial investment companies and will have to continue relying heavily on funds generated internally.

This point is made in a report on the services industry for the City by stockbrokers Greene and Co.

Lack of tangible assets has made service companies unattractive investment propositions, says the report. "The non-processing company has only its employees; the processing company need not own its equipment."

Their only assets are their products, which might be short-lived, and their client base, which can soon disappear. Thus, while these might be very attractive to another computing service company (particularly a foreign-owned company) seeking to expand, they offer little security to a financial investment company.

Commenting on the findings Alan Benjamin, director-general of the Computing Services Association, said the investment situation was true of any service industry. He pointed out that

investors would take equity as security as well as tangible assets.

"I am happy that the City is showing enough interest to generate a report," he said. "The industry must not mind if a few wars are exposed."

The report points out that computer services need more capital for more powerful processing facilities and packages. Relying on internally generated finance means that growth is slow.

Such growth makes for stability, says the report, but adds, "Difficulties begin where large increases in computing facilities, major product development, expansion overseas, are desired or necessary and, when the market turns down."

In these circumstances the independent company is vulnerable, while companies which are subsidiaries of larger groups have extra finance to call on.

This situation is reflected in a chart showing the 1976 turnover and profits of 80 service companies. At the top are the Post Office's National Data Process-

ing Service; the National Coal Board subsidiary Compower; and ICL's subsidiary Datacil.

The report says that the wide disparity in turnover between the top and bottom companies shows the domination of the market by a few very large organisations. At the top is the National Data Processing Service with £34.7 million, Compower with £10.5 million, and Datacil with £8.2 million. The turnover of the bottom 13 companies ranges from £135,000 to £500,000.

Even allowing for the amount of business which the top three get from their parent organisations they are still in the top 10.

The report gives a general background to the industry and several pages of charts showing companies' profit margins, capital employed, debtor control, turnover per employee and average salaries: the median here was found to be £4,242.

£45m micro based plan to stop fare fiddlers

A computerised automatic ticket checking project valued at over £45 million has been put forward by London Transport for GLC approval. Work could begin within nine months of approval.

The system is likely to have microprocessor based ticket machines controlled by a central supervisory computer. No decision has yet been taken on the nature of this central system, which could be based either on a large central mainframe installation or on some form of distributed processing.

The supervisory system will monitor all equipment and give immediate warning of any fault as well as providing information on the pattern of travel.

The system will be compatible with a similar British Rail scheme which is to start experimental trials next year using Ferranti F100-L micro in the ticket issuing machines (CW, March 3, 1977).

London Transport estimates that it loses £8 million each year through fraudulent travel and it is claimed that the automated system will eliminate much of this.

For, with the new system, the automatic gates will be able to read from the ticket where the passenger has started the journey and whether the correct fare has been paid.

Operations transfer by CMG

WITH less than a year to run on its existing contract with Burroughs, CMG is transferring all head office operations to its Croydon location, and is planning to replace its two Burroughs B4700s.

As well as the 4700s CMG runs a Honeywell H3200 and two H1200s. Nearly £2.5 million of work is handled each year.

CMG has been talking to several manufacturers and now has a short list of Burroughs, Honeywell and Univac. The Burroughs contender comes from its 800 series, the Honeywell bid is the 6000 series while Univac is offering machines from the 1100 series.

A decision is expected by the end of the month.

The selected hardware will eventually take over the work currently being run on the two B4700s, and will be operated in a twin processor, shared peripheral configuration at Croydon.

The hardware change will not effect CMG's subscription accounting and invest portfolio management work.

ICL strikes gold with 2900s

THE South African market has been more receptive for its size than other to ICL's 32-bit 2900 machines, and the company has struck gold there once again.

The customer this time is the giant Goldfields of South Africa, part of the Consolidated Goldfields group, which has ordered a £1.7 million 2970 to replace its £1 million 1904S. This is the eighth 2970 ordered in South Africa so far.

Applications planned for the 2970 include financial modelling, operations research, metallurgical plant simulation, stress analysis and rock mechanics.

Although already an ICL user, the company says it looked at all the major manufacturers' equipment before settling for a 2970 and ICL won the contract because of price, software, engineering back-up and the likelihood of ICL remaining in the market.

Danes sell German operation to TRW

DENMARK'S only computer manufacturer, Regnecentralen, has split its West German subsidiary, Gier, in two, and sold the marketing operation and the name to TRW Datacom International.

Previously the West German distributor for both Regnecentralen and TRW products, Gier will now concentrate exclusively on the TRW portfolio of equipment, which includes the Datapoint line of distributed processing systems, OCR equipment from Computer Entry Systems, Centronics printers and transaction terminals made by TRW itself.

A new company, RC Computer, has been formed by Regnecentralen to market the RC 8000 small mainframe and RC 3600 line of terminal systems. The RC 8000 is a small 24-bit mainframe similar to the 2903 and 2904 of ICL. It can

support several disc drives of up to 248 Megabytes each, and main memory extends from 32K to 384K words. The RC 3600 is a multi-purpose intelligent terminal system built around the Data General Nova 1200 mini.

RC Computer will also market the services of Regnecentralen's German bureau, which is based on the RC 8000 and the older RC 4000 computer.

TRW has been taking a financial interest in its distributors for some time and already has a 40% stake in both its French distributor Matra-Informatique, and its UK distributor Ventec. In each case it has the right to acquire the remaining shares later.

Regnecentralen will continue to market the TRW portfolio of products in Denmark, Norway, Netherlands, Austria and in several Eastern European countries.

Computer City at IBS

VISITORS to this year's International Business Show, to be held from October 11 to 20 at the National Exhibition Centre, Birmingham, will be able to walk around a Computer City - a walk-round display, by courtesy of ICL (CW June 8, 1977).

ICL designed the display, which is based on circular units, and is sited in Hall 1 of the centre.

Each unit in Computer City contains equipment for a particular field and those covered

include general office and accounts departments, manufacturing, retail and distribution, industries, finance, and the newspaper and printing industries.

The emphasis will be on VDUs and direct data entry devices for unskilled users.

Continuing overseas interest is being taken in the Business Show which will feature companies such as ICL, IBM, Wang, Datascab and Dato, the East German peripheral and email systems manufacturers.

Viewdata conference

A ONE-DAY conference on Viewdata, the Post Office's experimental information system, is to be held at the Mayfield Hotel in Berkeley Street, London on September 28.

Viewdata links the home television receiver via the domestic telephone to a potentially unlimited database of information. Any organisation can provide information and sell services via Viewdata, and the conference will feature speakers from the Post Office, potential users, information providers and GEC.

Speakers from the Post Office will include S. Feddie, the originator of Viewdata, and Roy Bright and Mike Smith from Post Office Telecommunications.

The conference will concentrate on the implications of Viewdata for business, and is being organised by Butler Cox and Partners in collaboration with the Post Office.

The charge is £86.40, and further information is available from Butler Cox and Partners. Telephone 01-353 1158.

The New Centronics 700 Series.

Now, the features that make our model 700 the best in the low price range of serial printers are available in a family of seven models: uncomplicated modular construction; the reliability of fewer moving parts; high parts commonality; and low price. All of which means a lower cost of ownership.

The new 700 family covers a full range of serial printer requirements: 80- and 132-column format; 60 to 180 cps speed range; bi-directional and logic-seeking operations; and 110-300 baud KSR and RO teleprinters.

Like all Centronics printers, the 700 family is better because we back them with a wide choice of customizing options and accessories. More than 100 sales and service locations worldwide. Centronics' financial stability and dependability proven by more than 80,000 printers installed.

Simplicity of design, full range capabilities and better back-up make our 700 series printers simply better. European HQ: Centronics Data Computer (U.K.) Ltd, Petersham House, Harrington Road, London SW7 3HA. Tel: 01-581 1011. Tlx: 8951373. Offices in Frankfurt and Paris.

Banks' problems and successes

In his weekly column Focus takes a down-to-earth, and sometimes acerbic, DP manager's view of various aspects of the computer scene. When he wrote about banking systems (CW, July 17), his comments were not very favourable. Here Charles Read, director of the Inter-Bank Research Organisation, takes up cudgels on behalf of the banks. He describes the systems that have been developed and are being operated by the UK Clearing Banks, and outlines some of the successes that have been achieved.

Mr Read writes: I was very surprised to read the Focus article which roundly attacked all aspects of banking systems. If your correspondent wishes to contact me, I will be delighted to point out a number of serious errors of fact contained in the article (for example, changing a standing order takes from one to four working days, not the "prescribed six weeks").

I do not intend, however, to pick over the bones of your correspondent's many complaints, but rather to indicate the true nature, scale and general efficiency of the branch banking systems currently being operated by the Clearing Banks in this country.

Firstly, it should be said that bank computer systems are not beyond criticism. The core of current systems was designed some years ago and it is true of all major systems that, with the benefit of hindsight and taking full account of the rapid changes in technology and techniques, a second attempt should be better than the first, but to start again from scratch is hardly practicable and a process of continual review and evolution should be, and is being, undertaken.

Returning to my theme, however, I feel that it is often not appreciated that the major constraints on banking systems result not just from complexity, but rather from the sheer scale of operation. The number of cheques and other types of payments received by the Clear-

Charles Read on a single day often exceeds 10 million.

In addition, unlike building societies, the Clearing Banks have taken steps to ensure that their customers do not have to go back to their own branch, for example, to draw out cash, but can use whichever bank branch happens to be convenient. With a combined total of over 10,000 branches covering the whole country, the need to maintain this flexibility of service often constrains the system options available.

The British Clearing Banks, therefore, have a systems problem which is literally unique. The daily volume of transactions with peak rates of perhaps two million transactions an hour is as far as I am aware, very much greater than the volumes dealt with by any other system or group of systems anywhere in the world.

And look at the input. A cheque carries a great deal more information than just the account number and amount. The date, the signature, the person to whom the money is to be paid, the branch where the cheque was received, the branch where the account is held, whether the cheque is crossed, whether it is guaranteed; all of these and more affect the action to be taken by a bank, and most details will be handwritten on the cheque and cannot therefore be pre-encoded in magnetic ink.

What then are the real systems options, remembering that any development must ultimately be justified in terms of reduced operating costs or additional business revenue? Massive multi-bank real time account updating systems are unlikely to be economic on this scale, even if they are technically feasible, while, given the wealth of data contained on a single cheque, some form of full manual data capture and batch update system would require thousands of additional staff for both data input and validation procedures.

In the circumstances, the banks have taken the sensible initial step of using machines to capture the information magnetically encoded on cheques, and to sort them for subsequent delivery to the branch where the customer's account is held. The captured information is used to compute accounting and other control totals which help ensure that payments are not misrouted or lost.

The resulting system is both cost-effective and very efficient. Your correspondent is badly informed about the number of errors, which is so small as to look ridiculous in percentage terms, and, in addition, the vast majority of the tiny number of daily errors are detected and corrected by branches.

Banks are not complacent about their current systems; indeed they are continually seeking ways of providing a better service, although always at a price customers are prepared to pay.

NEWS IN BRIEF

IBM to buy 2.5m more of its shares

FOLLOWING the purchase of over 2.5 million of its own shares at \$280 apiece earlier this year (CW, March 17), IBM has announced that it is prepared to spend up to \$700 million to buy up to 2.5 million more.

It will buy shares offered to it from time to time at not more than the going market price, but is not interested in blocks of less than 5,000.

AGREEMENT has been reached on a new bid by Moore Corporation subsidiary, Moore Business Forms for the preference share capital of Lamson Industries.

UP to 18 SyFA minicomputers, hosted by an IBM 370/188 in California, will provide a data network spanning three continents under a contract signed by Computer Automation, manufacturers of the SyFA system, and the Fairchild Camera and Instrument Corporation.

RELEASED of the NCC in Dallas last month, Zygol Dynamics of Chesham, Bucks, now includes the Diabli Hytem Matrix Terminal in its product range. The terminal operates at 120 cphs, and Zygol has modified it to provide isolation to comply with Post Office regulations to enable it to be connected to P0 modems.

Open day

An open day has been organised by Univac of the West London Stadium which, they say, is open to everyone. It's on Sunday August 14, and for the really enthusiastic it starts at 9.30. Amongst the activities there are a six-a-side football tournament, a beauty competition, and welly throwing. In the evening there is to be a disco with a talent competition. The stadium is in Old Oak Road, near Wormwood Scrubs Prison, and anyone who wants to take part in the various contests or to offer teams for the soccer should contact John Trendall on 01-238 1810, extension 315.

OP SPOT

Fading away due to lack of recognition

IN OPSHOT of July 14, the question was posed: "Old operators never die, they simply fade away! But where?" John Shales, an operator from Broadstairs, Kent has an interesting solution to the problem.

Shales comments: "I believe that operators, in a lot of cases, are never given the merit or demerit due to them. I think it must be accepted that operators on shift are a part of a team, but they are consequently always judged as such. "You often hear the phrase 'the night shift' or 'Nimrod's shift'. If something goes wrong, or if a problem is resolved with a good deal of expertise, very rarely is the credit given to the person directly responsible.

"The person who normally writes reports and incidents is the shift leader. His signature appearing on the form generally gives him the credit, although he may not necessarily be the technician. This situation probably arises owing to the remoteness of shift workers from the managerial staff.

"Would it not be fair to have the ops manager or chief operator work on each shift for a couple of weeks, maybe once or twice a year? He would act not as a participant or adviser, but purely as an observer to see exactly what happens.

"He would then see which of his staff had technical expertise and practical ability, and which were merely 'tape apes'. After all, how many DPMs know the qualities of each

THIS week a reader comes up with a solution to the question: What happens to old operators?

individual? I suspect that, in the main, they only know the strength of a shift as a whole.

"Therefore I submit that many operators fade away simply due to lack of recognition and financial reward commensurate with ability.

"My second possible solution is that quite often people who are employed as operators are over-qualified. If an installation requires people who will eventually progress to technical support, programming, and management, then this is great. If however, operators are wanted who will remain within the operations department, people who will be the backbone of the department, and who will get to know the systems inside-out, then Einsteins are not needed.

"While I accept that operators need to be intelligent, I would say that aptitude is equally or more important. How many times do you read an advert for operators' jobs which insist that applicants should have an 'A' level education? By that one statement, I would say that the field of applicants becomes much more limited and, just because a person has 'A' level qualifications, it does not mean that he is ideal for the job.

"After all, despite his 'A' levels, he may still not possess the aptitude for the job. If he does possess both aptitude and 'A' level intelligence, he will soon become dissatisfied, and if there are no openings for progressing, he will become bored, and may leave the industry altogether."

Galcomp to produce Solar line under licence

MORE details have now emerged about the agreement between Galcomp and SEMS under which Calcomp will incorporate Solar minis from the French company into a new line of off-line plotting systems (CW, May 12).

The initial batch of Solar minis has come from France, but under the agreement, Galcomp gets the right to manufacture the Solar line under licence, for incorporation both into the graphic systems and into other future Calcomp systems.

In addition, if SEMS decides to market the Solar and Mitra lines in the US, it will be able to make use of Calcomp's service and maintenance network.

SEMS uses Calcomp's Trident disc drives with its minis, but a Calcomp spokesman in California told Computer Weekly that the minicomputer agreement was unconnected with the sale of disc drives to SEMS.

The merger between the minicomputer division of CII and Télémelecánica to form SEMS into the largest European-owned general-purpose minis, is beginning to bear

Output of Solar minis more than tripled in the first half of the year, the company reports. During May, 50 Solar systems were delivered, bringing the installed base to 400. Production

of Mitra minis at the CITEC factory in Toulouse, which builds the former CII line for SEMS, also increased. More than 300 systems were delivered in the first half of the year, and the installed base now exceeds 2,500. By comparison, DEC is currently building PDP-11 series minis at a rate of over 2,000 a month.

Almost 30% of the business placed with the company came from outside France. To avoid excessive conflict between the competing systems in the Mitra and Solar lines, SEMS has decreed that the Solar line will be directed towards automation, process control and production control applications, and the Mitra line towards transaction processing, teleprocessing and network applications.

Among the more exotic contracts won by the company is one from Danish engineering company F. L. Smith which specialises in the design and implementation of cement works. Two 48K-word Solar 16-40 minis are on their way to Vietnam, where they will be used for quality control of the cement-making process, working on X-ray data. Similar use has been made by Smith of SEMS minis in installations for Poland and the Popular and Democratic Republic of Korea.

THE first Honeywell 62/20 minicomputer to be installed in the UK is now on site at the South headquarters of G. W. Sparrow and Sons, the crane hire and lifting specialists. The 62/20, which replaces an IBM System 3/10 installed three years ago, will be used primarily to provide management information. This will include profitability per crane, profitability per depot and a contract register to show the current status of each job. In addition, the system will also run the normal

management and clerical functions of wages and salaries, payment of suppliers and sales and purchases ledger. All these programs have been converted from the IBM version to allow running on the 62/20, which is a basic system equipped with 38K of core memory, 40Mbytes of disc, a 200 lpm printer and a 96 column card reader.

● Jim Brown, the company's data processing manager, is pictured with Christine Murray in the new installation.

UCC answer to the mini threat

RECOGNISING the threat to service bureaux from minicomputer systems houses, the University Computing Company has introduced what it calls a Total Service for its customers throughout Europe.

Under this, UCC supplies the client with a minicomputer system for local data entry and interactive file inquiry while continuing to process his big batch jobs at the UCC utility, all for one monthly charge.

The aim is to combine the best features of the in-house mini system and the service bureau.

UCC director of client services, John Harries, explained that under Total Service UCC selects the minicomputer system needed by the client, buys all the hardware, and installs it at the client's site. The customer's only capital expenditure, according to Harries, is on the interactive software UCC develops to interface the client's terminal operators with files on the mini system and at the UCC utility.

Batches of data created during the day are transmitted to UCC at night for file updating.

Harries said that Total Service is aimed at both technical and commercial users and can be offered as a less expensive and less complex alternative to a stand-alone in-house system like the ICL 2803, IBM System 3 or a medium to large mini configuration. In some cases it could be more effective than an in-house minifrance.

Total Service is a development

Thames TV system for ad planning

A £300,000 system called Enterprice has been implemented by Thames Television to handle television advertisement sales planning. The system is based on a 512K Honeywell 66/20 sited at EMI's Hayes office, and features six 200 Mbyte disc stores, six tape drives, three high speed printers, and three front-end communications processors.

Both salesman and managers use Enterprise via VDUs on their desks, inputting bookings and requesting evaluations of planned advertisement campaigns. The system responds with the best findings and costs.

Previously, Thames relied on a semi-automatic system which involved the preparation of paper-tape from written sales documents which was then processed by computer.

European PTTs offer links to US databases

FOLLOWING the lead set by the UK Post Office (CW, August 4), several other European PTTs are offering links to US databases.

The Dutch PTT has now installed a Tymnet CP-2 concentrator, based on a Varian V72 mini, and has begun offering an access service to databases on both the Tymnet and Telenet networks.

The French and Belgian PTTs are also offering the service; Switzerland plans to introduce it this month; and Spain and West Germany later in the year.

Tymshare Corp, which operates the Tymnet network, describes it as "a packet but not a packet-switched network". The user is not involved in packet assembly and disassembly, but data from several sources and bound for several destinations is multiplexed together at each node in the network. There are four network control centres, but only one is active at any one time.

Early Tymnet nodes use the Varian 620/1 mini, and Tymshare has been right through the Varian line to the V72, but now uses Interdata 7/32s.

●

Distributors

IN the article by Nicholas Benwell headed "Deciding on the right magnetic peripherals" (CW, July 7), the name of a former distributor of the Comet Computing Systems Stockholder was inadvertently given. Distribution is at present handled by Comet, but arrangements are now being completed for the appointment of new distributors.

SYSTEMS EDUCATION

BASIC INTRODUCTION

A two-week residential course for trainee and junior systems analysts. The course teaches the essential skills by means of formal lecture sessions, individual exercises, and case-study work in student syndicates.

● Luton October 3rd-14th
● Heathrow December 5th-16th

Fee £550 including accommodation and meals.

ADVANCED SYSTEM DESIGN

This course has been designed to extend the knowledge and capabilities of the analyst who already has some practical experience. It is a 5-day course, run residentially to achieve the greatest effect.

● Luton October 17th-21st

Fee £275 including accommodation and meals

For full details contact:

Allan D'Morlas & Associates Ltd.

60 High Street, Harrow-on-the-Hill

Middlesex HA1 3LL

Telephone: 01-864 9666

Which finger on the button?

THE first few IBM Series models to arrive in this country reveal a curiously non-ergonomic distribution of controls.

A prominent feature of IBM's 360s and 370s is a large "emergency pull" button on the console, which shuts down the whole machine instantly in the event of a catastrophe. On the Series 1, this button is not on the console, but at the very top of the machine, about six feet from the floor. It would be interesting to "benchmark" the delay caused by this placing and its possible consequences.

The on-off switch on the floppy disc unit appears to be intended for operation with the knee. If it is placed at the same height on all machines, Series 1 operators should soon be complaining regularly of back-ache.

Still, perhaps we are being unfair to IBM. The company is, after all, unused to designing tall thin computers. The machine is also modular, so possibly those we have seen

"She's a Series-1 operator, I think..."

Pork chop logic

EDINBURGH University scientists have come up with the perfect pig — a computer simulation which does everything but grunt. The development could revolutionise the pig farming industry, allowing nutrition research which normally takes a couple of years to be carried out in a matter of hours.

Dr Colin Whittemore, of Edinburgh University School of Agriculture, helped by a mathematical economist and a computer expert, built the computer to carry out animal production experiments without the aid of animals.

The system incorporates a complex series of equations representing the biochemical

and physiological reactions of a pig to various diets, weather conditions, accommodation, and so on.

The electronic pig then churns out a day-by-day breakdown of the animal's growth rate under different sets of conditions. It can "grow" several months in seconds.

The researchers can tell whether a pig will be fat or lean, whether suitable for pork or bacon, and work out costs. The system will enable pig farmers to plan well in advance to produce pigs to order.

Real porkers, that is: only the Muppeteers can produce that epitome of porcine sophistication, Miss Piggy.

Brought to book

A FOOTNOTE to Computer Weekly's call for action to spread the gospel about computers among the gentiles: my Bristol scout reports the following from a local newspaper. I quote:

"When a suggestion was made today to investigate the use of a computer system into the Avon County Library Service, Councillor Don Rippon expressed the gravest doubts about whether society had gained very much from computers... He said he had lived with computers for the last ten years and called them a useful adaptation to a clerk with a pen. But whether they

had improved on the chap with the pen was another matter, especially over accuracy in accounting.

"He warned his colleagues on the county's community leisure committee that while the computerised age was with us, if a computer were introduced into the library service it would not necessarily save money, for it would call for expensive equipment and highly skilled and specialised staff. The committee agreed to an investigation, provided this itself did not cost too much."

I wonder if the Avon library service has an up-to-date book on the subject?

Univac scores at Ayr

VISITORS and journalists at the Open Golf Championship at Turnberry, Ayrshire, last month, were saved the drudgery of traipsing round the course to follow the stars' progress, thanks to Univac.

The company installed three DCT 500 terminals at the course. Results were telephoned to the central control room. They were input to a terminal there and transmitted to other terminals in the visitors' tent village and the Press centre. So journalists were able to write

detailed reports for their sports pages without ever leaving the bar.

"ARE you in the elite 0.1 per cent who know how Dijkstra differs from Jackson?" asks a Honeywell announcement of a structured programming course. It seems that certain people within Honeywell aren't within the elite percentage who know how to spell Dijkstra. As most of the elite know, the real difference is that Dijkstra has a beard and Jackson hasn't. The announcement also states who know how to spell Dijkstra's first name.

Rapid growth seen in floppy disc market

THE number of units shipped by the floppy disc drive industry worldwide will increase by 33% a year over the next five years according to a study by the Venture Development Corp, a Massachusetts-based consultancy specialising in the electronics industry.

The study predicts that the actual numbers shipped will grow from 145,000 in 1976 to 605,000 in 1981, and that sales of all types of drives will increase apart from full-sized non-IBM compatible models, sales of which will dwindle to nearly zero by 1981.

Sales of IBM-type drives from OEMs for non-IBM systems will grow from 103,000 units in 1976 to 392,000 in 1981. The study sees 75% of all floppy disc drives shipped by then having double density data recording. Double sided drives will account for 40% of all shipments by 1981.

Other trends include a rapid growth in sales of minifloppy

drives from 1,000 units in 1976 to 76,000 in 1981, although VDC points out that they will not substantially replace full-sized units.

The biggest applications area for floppy disc drives by 1981 will be in small business systems rather than intelligent terminals, as now, because the latter will tend to be upgraded to the status of small computers over the period.

The study sees no serious threat to floppy disc drive sales from the emerging solid state technologies like bubble memories and charge coupled devices. This is mainly because they are too expensive and inconvenient for jobs where the media needs to be removed.

Floppy Disc Markets II, 1977-1981, \$850, additional copies \$75. Venture Development Corporation, 1 Washington Street, Wellesley, Massachusetts 02151, USA. Tel: (617) 237-5080.

More opt for Seecheck

ORGANISATIONS opting for the Redifon Seecheck key-to-disc system include the General Register Office (Scotland), GEC Measurements, commercial vehicle manufacturer, ERF, a Channel Islands based bureau EDP Jersey Ltd, and Hunting Engineering.

The General Register Office is installing a 12-keystation Seecheck to prepare births, deaths and marriages data for processing on an ICL 1903A.

The Seecheck at GEC Measurements at Stafford will be a decentralised system with 20

keystations, all generating data for processing on a 370/158.

Redifon has also won three local government orders. All the systems replace ICL data preparation equipment.

County Council, with a 24-terminal system with two 5-Megabyte disc drives; West Midlands County Council, with 18 terminals and one disc; and Wessex Water Authority, which is getting four terminals and two discs. Total value of the orders is over £150,000.

SBS seeks third earth station

THE Satellite Business Systems consortium, composed of IBM, Comsat and Aetna, has applied to the US Federal Communications Commission to build its third earth station at IBM's Research Triangle Park near Raleigh, North Carolina.

The station, required for development work during the SBS preparations, will be used to carry private line voice and high-speed data transmissions starting early next year. The stations already built are at IBM's Poughkeepsie, New York and Los Gatos, California factories.

The installation will be based on twin Data General Nova 3/D minis and 30 Lynwood VDU terminals. System development will be aided by Software Sciences' subsidiary Computite. Implementation is expected to take about seven months.

ROYTRON™ plug-compatible reader/punch

Desktop combination reader/punch with serial asynchronous RS-232C compatible interface. Designed to operate with a terminal device on the same serial data lines or alone on a dedicated serial line. Reader will generate data at all standard baud rates up to 2400 baud. Punch accepts data at all standard baud rates up to 600 baud continuous or 4800 baud batch, utilizing a 32 character buffer. Two modes of operation are provided: Auto Mode - Simulates Model ASR 33 Teletype using ASCII defined data codes (OC 1, 2, 3 and 4) to activate/deactivate the reader or punch; Manual Mode - Code interpretation mode. Panel switches control activation/deactivation of reader or punch and associated terminal device. Tape duplication feature is provided by setting unit to LOCAL mode.

MODEL 1550-AS High speed, compact, with self-contained electronics and power supply. Complete in attractive noise dampening housing.

For full details, write or call us. SWEDA INTERNATIONAL, INC. 14 Union Street, Boston, MA 02108, USA. Tel: (617) 552-1000. In U.S. - ASK FOR SWEDA INTERNATIONAL, INC. In U.K. - SWEDA INTERNATIONAL, INC. 140, 141, 142, 143, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 154, 155, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 169, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200, 201, 202, 203, 204, 205, 206, 207, 208, 209, 210, 211, 212, 213, 214, 215, 216, 217, 218, 219, 220, 221, 222, 223, 224, 225, 226, 227, 228, 229, 230, 231, 232, 233, 234, 235, 236, 237, 238, 239, 240, 241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, 264, 265, 266, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 282, 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293, 294, 295, 296, 297, 298, 299, 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421, 422, 423, 424, 425, 426, 427, 428, 429, 430, 431, 432, 433, 434, 435, 436, 437, 438, 439, 440, 441, 442, 443, 444, 445, 446, 447, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511, 512, 513, 514, 515, 516, 517, 518, 519, 520, 521, 522, 523, 524, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 544, 545, 546, 547, 548, 549, 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 569, 570, 571, 572, 573, 574, 575, 576, 577, 578, 579, 580, 581, 582, 583, 584, 585, 586, 587, 588, 589, 590, 591, 592, 593, 594, 595, 596, 597, 598, 599, 600, 601, 602, 603, 604, 605, 606, 607, 608, 609, 610, 611, 612, 613, 614, 615, 616, 617, 618, 619, 620, 621, 622, 623, 624, 625, 626, 627, 628, 629, 630, 631, 632, 633, 634, 635, 636, 637, 638, 639, 640, 641, 642, 643, 644, 645, 646, 647, 648, 649, 650, 651, 652, 653, 654, 655, 656, 657, 658, 659, 660, 661, 662, 663, 664, 665, 666, 667, 668, 669, 670, 671, 672, 673, 674, 675, 676, 677, 678, 679, 680, 681, 682, 683, 684, 685, 686, 687, 688, 689, 690, 691, 692, 693, 694, 695, 696, 697, 698, 699, 700, 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716, 717, 718, 719, 720, 721, 722, 723, 724, 725, 726, 727, 728, 729, 730, 731, 732, 733, 734, 735, 736, 737, 738, 739, 740, 741, 742, 743, 744, 745, 746, 747, 748, 749, 750, 751, 752, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764, 765, 766, 767, 768, 769, 770, 771, 772, 773, 774, 775, 776, 777, 778, 779, 780, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790, 791, 792, 793, 794, 795, 796, 797, 798, 799, 800, 801, 802, 803, 804, 805, 806, 807, 808, 809, 810, 811, 812, 813, 814, 815, 816, 817, 818, 819, 820, 821, 822, 823, 824, 825, 826, 827, 828, 829, 830, 831, 832, 833, 834, 835, 836, 837, 838, 839, 840, 841, 842, 843, 844, 845, 846, 847, 848, 849, 850, 851, 852, 853, 854, 855, 856, 857, 858, 859, 860, 861, 862, 863, 864, 865, 866, 867, 868, 869, 870, 871, 872, 873, 874, 875, 876, 877, 878, 879, 880, 881, 882, 883, 884, 885, 886, 887, 888, 889, 890, 891, 892, 893, 894, 895, 896, 897, 898, 899, 900, 901, 902, 903, 904, 905, 906, 907, 908, 909, 910, 911, 912, 913, 914, 915, 916, 917, 918, 919, 920, 921, 922, 923, 924, 925, 926, 927, 928, 929, 930, 931, 932, 933, 934, 935, 936, 937, 938, 939, 940, 941, 942, 943, 944, 945, 946, 947, 948, 949, 950, 951, 952, 953, 954, 955, 956, 957, 958, 959, 960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972, 973, 974, 975, 976, 977, 978, 979, 980, 981, 982, 983, 984, 985, 986, 987, 988, 989, 990, 991, 992, 993, 994, 995, 996, 997, 998, 999, 1000.

Critic of decision tables standard gives reasons

FOLLOWING last week's news of objections to the British Standards Institution's standard for decision tables (CW, August 4), one of the foremost critics, Peter M. Bell, has itemised his criticisms of the standard. Bell has extensive experience of decision tables, having produced his own package, Octab.

He writes: Decision tables are the subject of a British Standard published at the end of July "Recommendations for Decision Tables used in Data Processing" (BS 5487:1977).

One might have expected the standard to start with clear-cut definitions, to work through a crisp exposition, and to end by demonstrating the proof of what had gone before. Not a bit of it!

The standard starts cautiously, as if suspecting some inexplicable truth to emerge, edges its way round some basic misconceptions, and finally provides examples to prove that, given these misconceptions, a "balancing item" is needed (in the form of an ELSE rule) to achieve the proof.

One basic misconception concerns the number of condition states which are proper to particular forms of condition.

Consider a condition expressed in a decision table as:

CODE = A YN

The condition states for this condition are:

CODE = A YN
CODE = B YN

Consider two conditions expressed in a decision table as:

CODE = A YN
CODE = B YN

Consider these two conditions expressed in a decision table as:

CODE = A YN
CODE = B YN

Clearly, the condition state "NOT A AND NOT B" is not represented above.

There is no acknowledgment in the standard of the NOT condition state described above. For this reason, an extended entry decision table is found to be incomplete when converted to a limited entry decision table; a situation promptly resolved by including an ELSE rule in the latter table.

For readers not aware of the function of the ELSE rule, the standard offers no enlightenment: it is not defined. There is, however, a recommendation that:

alternatively, the condition entries in an ELSE rule are represented by dash symbols which, in conjunction with an earlier statement:

'the dash symbol "-" as a condition entry indicates that the condition is either irrelevant or impossible'

must make the ELSE rule either wholly irrelevant or wholly impossible.

On the other hand, the rule

Puzzler

If a needle, one centimetre long, is dropped at random on to the centre of a large flat surface covered by parallel lines, all one centimetre apart, what is the probability (expressed as a fraction) that it will come to rest lying across one of the lines?

count checking' method described in the standard indicates that if the condition entries in the ELSE rule are represented by dash symbols, then the ELSE rule represents every combination of condition states for the whole table. So there it is! All or nothing. As an alternative,

In an apparent attempt to move on to firm ground, the standard recommends an intermediary method of condition entry construction which is laborious and tedious in the extreme. The 'progressive rule development' method is quicker and more efficient, but is not

mentioned in the standard. There is no denying, however, that the method recommended would work in all cases if the NOT condition state described earlier were taken into account. It cannot be claimed that this standard will advance the state of the art.

He writes:

Decision tables are the subject of a British Standard published at the end of July "Recommendations for Decision Tables used in Data Processing" (BS 5487:1977).

One might have expected the standard to start with clear-cut definitions, to work through a crisp exposition, and to end by demonstrating the proof of what had gone before. Not a bit of it!

The standard starts cautiously, as if suspecting some inexplicable truth to emerge, edges its way round some basic misconceptions, and finally provides examples to prove that, given these misconceptions, a "balancing item" is needed (in the form of an ELSE rule) to achieve the proof.

One basic misconception concerns the number of condition states which are proper to particular forms of condition.

Consider a condition expressed in a decision table as:

CODE = A YN

The condition states for this condition are:

CODE = A YN
CODE = B YN

Consider two conditions expressed in a decision table as:

UK team to upgrade dictionary

ENHANCEMENTS to US-based Cincom's data dictionary are to be the task of a team within the company's UK technical support group. This again emphasises the growing regard among multinational companies for their software development resources in the UK.

The enhancement, expected later this year, will increase the amount of information immediately available to the user on the data stored within the system, and will also simplify the immense task of initially building a data dictionary and keeping it up to date.

The most controversial of the new facilities will be an interface to allow the automatic updating

of the data dictionary from the information contained in program source-code and database definition modules.

A similar facility has already been implemented for Cullinane Corp's data dictionary (CW, December 9, 1976). Although this clearly eases the construction and maintenance of the dictionary, some data dictionary experts have pointed out that it places dictionary update capability in the hands of the programmers. This, they contend, should be the province of the database administrator.

Cincom recognises this view, and UK operations manager John Hale pointed out that a database administrator could

always forbid use of the facility after it had been used for the initial set-up of the dictionary.

As a later enhancement, and to some extent supporting the exclusive status of the DBA, Cincom is to produce a copy facility, allowing information from the data dictionary to be copied into the program to provide its data definitions.

Online updating of the dictionary will also be provided, input being through 3277 or compatible visual displays, under the control of Cincom's Environ/1 teleprocessing monitor.

The Cincom data dictionary is chiefly intended for use with the company's Total database.

HPD is to make the system available through the South-west Computer Services bureau. In-house, it will run on any IBM 360 or 370 under DOS, said the consultancy.

No firm contracts for the system have been signed yet, but HPD is "talking actively" to some impressive UK prospects.

"The service is getting more response in the UK than Switzerland", said HPD.

How far do standards concern the average installation and the average programmer, however? Clearly, their main purpose is to aid portability, an aspect with which many installations are seldom concerned.

Does your installation insist on using an ANSI or other "standard" compiler? If so, why? Does the compiler have extensions to the standard? Are you and your fellow programmers allowed to use the language to its full potential, or are you restricted?

Leading on naturally from this topic is the general question of restriction of the language repertoire. Many installations rigidly exclude their programmers from using certain language features: not in the cause of portability, but in the hope of producing better programs.

The most notorious example of this practice is the elimination of the GOTO, but the advanced features found in an ANSI superset are also high on the list for exclusion.

Do you believe that this kind

of restriction confers the benefits claimed for it, or does it merely handicap your programming efficiency and style? Should all programmers be allowed to use the full facilities available in their compiler?

One of the reasons for the evolution of extensions is doubtless the age of some of the standards. A coherent picture of the extensions that programmers consider necessary may well be of help in influencing decisions on the features of future standards.

ICL library package from GRL-Abacus

A SOURCE library maintenance program for ICL 2803 and 2804 machines has been developed by GRL-Abacus. Known as Abilib, it has been designed, says the company, to provide simplicity and time-saving features not available with the standard ICL library management routines.

Upgraded SBC-80/20 on offer from Intel

TWO upgraded versions of the SBC-80/20 single board OEM computer are now available from Intel.

The standard SBC-80/20 is now produced with 8K bytes of program memory on board, in place of 4K bytes. Also available is the new SBS-80/20 which has the read/write memory upgraded from 2K to 4K bytes. Both are being sold at the same price and Intel consequently expects to offer considerable savings in systems costs in a number of medium scale applications.

These range from process control operations, where the doubled memory capacity is expected to be of particular benefit, through to front-end processing, intelligent terminals and distributed and multi-

processor computing systems. The other features of the SBC-80/20 are retained in the upgraded versions, including the bus arbitration control system. This allows up to 16 80/20 computers to share the same databus by providing automatic resolution of any conflicts that arise when two or more machines attempt simultaneous control of the bus.

In addition, several hardware problems, such as interface design, interrupt structure and control, and communications protocol are eliminated by using software control.

For systems requiring greater memory capacity than that held on the new CPU boards, additional memory cards are also available.

SC/MP retrofit kits from National

USERS of the National Semiconductor SC/MP microprocessor will now be able to evaluate the new SC/MP-II version of the device, following the introduction by the company of retrofit kits.

The kits have been produced to allow qualitative and quantitative comparisons between the two devices, and differ primarily in terms of operating speed and power dissipation. The new SC/MP-II version is claimed to operate at 4MHz, twice the speed of the original, while dissipating approximately 25% less power.

An additional improvement is the change in power supply requirements. The original SC/MP needed a +5 volt and

7 volt supply which has now been reduced to a single +5 volt requirement to help reduce installed costs in terms of power supplies, and allow easier interfacing with other semiconductor components.

The retrofit kit in addition to the SC/MP-II CPU includes a 2MHz crystal clock and the necessary documentation. The clock is intended to be used to de-rate the operating speed of the CPU to that of the original SC/MP device for direct comparisons. Following evaluation, and the inclusion of changes necessary in systems software to cope with the higher speed, the SC/MP-II can be plugged in as a direct replacement for the earlier version.

Short courses at Hatfield

A SERIES of short courses on programming for microprocessors are to be run by the School of Information Sciences at Hatfield Polytechnic during the autumn term.

Two courses aimed primarily at engineers with little computing experience, will introduce students to the assembly and editing of microprocessor programs, and offer hands-on experience on a Motorola M6800 based system. The courses are either an eight-session, after noon/evening course, starting October 5, or a 10-session

evening course starting on October 11.

For experienced users, especially those already working with M6800 systems, the Polytechnic is offering a three-session, afternoon/evening course that will introduce the resident software for the M6800 development systems, together with the use of Fortran Basic and Macro-assembler. Starting date for this is November 30.

Further information can be obtained from the School at Hatfield Polytechnic, PO Box 109, Hatfield, Herts AL10 9AB.

Greater M6800 throughput

MOTOROLA has increased the operating frequencies of its MC68A00 and MC68B00 microprocessors to allow significant improvements in throughput in systems configurations.

The MC68A00 is now available with an operating frequency of 1.5MHz, while the MC68B00 has been upgraded to 2MHz. Both operate at a minimum frequency of 0.1MHz, and have cycle times set between 0.886 and 10 microseconds.

conditions for the MC68A00, and 0.50 and 10 microseconds for the MC68B00. In addition power dissipation for the two is reduced by 20% compared to standard MOS components.

The greater throughput is available when the processors are configured in systems using the fast peripheral and asynchronous communications interface adapters and the 68A10/68B10 random access memories.

South African micro

NOT content with obtaining microcomputers solely from overseas sources, South Africa now has its own indigenously developed product.

Known as the Commander, the microcomputer has been designed and manufactured by Messina (Electronic) Development Co, a subsidiary of the

Messina (Transvaal) Development Co.

Little is known of the equipment beyond the manufacturer's claim that it is more versatile than the standard microcomputer. They are aiming the equipment specifically at applications in the mining, industry and commercial sectors.

Visual Display Units and their application

Edited by Derrick J. Grover
Chairman, British Computer Society Displays Group

Visual display units provide one of the fastest means of interaction with a computer, and they are being employed in industry in ever-increasing numbers. Their applications are wide-ranging, including airline-seat reservations, stock-control systems, information retrieval, stock-market and business quotations, text editing and information updating.

VISUAL DISPLAY UNITS is based on a tutorial seminar organized by the British Computer Society. The book is intended for computer users who already employ VDUs or plan to use them to enhance their system. It will be of great value to management in their basic decision-making, and to the system analyst and data-processing manager who put those decisions into practical effect.

PEOPLE

Rank Xerox wins National Management Game again

A TEAM from Rank Xerox has won the National Management Game for the second year running. The team, John Chappell, manager of asset planning, and Paul Webb, a senior business analyst, made a profit of over £10.8 million in the computerised game sponsored by ICL, the Institute of Chartered Accountants in England and Wales, the Financial Times and the Institute of Directors.

In second place was a team from Eley Ammunition, part of Imperial Metal Industries, with a profit of £10.3 million.

T. Wall and Son (Ice Cream) was third with £8.9 million, and Unilever fourth with £5.1 million.

The winners received a cheque for £1,000 and a chance to play in the European Management Game in West Germany next month.

Harris Corporation vice-president named

RECENTLY appointed corporate vice-president of the Harris Corp Information Systems Group in the US is Jack Davis, who will retain for the time being his position as vice-president and general manager of the data communications division (Natus Operations).

The Information Systems Group comprises four divisions: data communications, which is in Dallas, Texas, and computer systems, composition systems and controls, all in Florida.

Before joining Harris in 1962 Davis was a research engineer with North American Rockwell. He held various engineering, marketing and programming management positions in the radiation division before being appointed vice-president and general manager of the controls division. He was appointed to his present position in April 1974.

Eric Cole of Data Recognition has been promoted from senior sales executive to national sales manager. Former computer services manager Colin Knight becomes production manager. Commercial manager MI-

chael Hunt takes on the additional responsibility of customer services, and Edward Gilmore, previously purchasing officer, has been appointed supplies manager.

Recently appointed systems development manager at Data Recognition is former engineering manager Ralph Goldbold, and Peter Watts, who until lately was a senior engineer, has been made hardware development manager.

Paul Lappard has been appointed sales manager of Software Architects. A former sales director of Computer People in Holland, he returns to the computer industry after a year as licensee of a pub and restaurant.

Andrew Kaberry has become financial director of Systems, allowing chairman John Parkinson to relinquish his financial duties. Kaberry was formerly financial director of Associated Weavers Carrels.

CONFERENCES

DIGITAL Processing of Signals in Communications is the title of a four-day conference to be held at the Loughborough University of Technology on September 6-9. It has been organised by the Institution of Electrical and Radio Engineers. Ralph Benjamin, Chief Scientist at Government Communications Headquarters, will open the conference on the subject of the role and scope of digital processing in communications systems. Details from the Conference Secretariat, IERE, 6-9 Bedford Square, London WC1B 3RG, tel: 01-837 2771.

CONVENTION Internationale de la Europeenne data processing conference which takes place in Paris apart of Sicob, the international exhibition of OP hardware and communication and office equipment. The theme of the seventh Convention - which is divided into four sections - under the headings data processing, communication, software and data distribution and user forum - is to be Computing under Control, and for many of the sessions simultaneous interpretation will be available. The conference will be held at the Palais des Congres, Paris on September 18-23 and further details are available from Conventions Internationales, 6 place de Valois, 75001 Paris, France, tel: 261 52 42 - 261 46 21.

THE electronic components exhibition, also held in Paris, le Salon International des Composants Electroniques, will be open to exhibitors of the following active, passive and electromechanical components, measuring instruments, materials and products of special interest to the electronics industry: equipment and methods specific to the manufacture and installation of electronic components. The exhibition is organised by the Societe des Fabricants des Composants de l'Electronique, and will be held at the Parc des

COVENTRY software house Systems Resources advertised recently for a "friendly battle-axe to keep the directors in order." Nine Srett, who is 24, hails from Surrey and was previously with the Royal Agricultural Centre at Stoneleigh, Warwick, got the job as managing director's secretary. Here she attempts a "binary chop" with a real battle-axe, courtesy of the Herbert Art Gallery and Museum. Nearest the razor-sharp edge is managing director Paul Ingram, and Trevor Bucknell, production director, is trying to duck behind him.

fan Cox has joined Applied Computing and Software as a recruitment executive to handle contract staff. He was formerly sales manager with New Opportunity Press. He replaces Sara Tavernier who has transferred to the company's US associate, ACS America Inc as contract staff sales executive based in New York.

Gold medal for systems analyst

SENIOR systems analyst John Jenkins has won a gold medal for the 50-metre freestyle swim in the National Paraplegic Games, held at Stoke Mandeville.

Jenkins works for Baric Computer Systems in Feltham, Middlesex where he is currently employed on a custom-built labour system and a personnel application for Hawker-Siddeley.

He lost the use of both legs after getting polo at the age of 5, but is interested in many sports, and besides swimming enjoys table tennis, shot putting, and discus and javelin throwing. He is a committed member of the Stoke Mandeville Sports for the Disabled Society.

Bryan Thompson, CMC's new territory manager for the North-East, was formerly a branch manager with Computer Ancillaries Ltd.

Bill Edmonds and Tony Gray have been promoted from salesmen to branch managers with Data General. Edmonds will handle the London area, Gray the remainder of the South-East.

Death of Charles Sweatt

Charles Sweatt, vice-chairman of the board of directors of Honeywell Inc, from 1963 to 1969, died in Minneapolis on July 31, at the age of 92.

He was a son of William Sweatt, the founder of Honeywell. He joined the company as a salesman and director of advertising activities in 1917, became a vice-president and director in 1927 and was elected executive vice-president in 1945. He retired from active management in 1960, but remained on the Honeywell board until 1967.

DIARY

Expositions on April 2-8, 1978. Exhibitors' files may be obtained from SOSA, 20 rue Hamello, F 75110 Paris, tel: 33 1 305 1317.

A THREE-DAY tutorial conference on software for numerical optimisation has been organised by the National Physical Laboratory and will take place at the Hotel Russell, London on March 20-22, 1978. It aims to bridge the gap between those who develop mathematical methods and write software, and the ultimate user, and discussion will centre on the optimisation software which will be available from the NPL and NAG libraries from March 1978. The conference is designed for engineers, scientists and economists who wish to use optimisation techniques and to gain access to the relevant software. Registration forms and further details from Dr R. E. Gill or Dr W. Murray, Division of Numerical Analysis, National Physical Laboratory, Teddington, Middlesex TW11 1LW.

August 18-19 Operational data security workshop, University of Kentucky, The City University, London EC1.

August 21-26 Law of the world conference, World Peace through Law Centre, Manila, Philippines.

August 24 Meeting, UK and Ireland VM370 Users Group, Commercial Union, Oxtails, Jeff Chisholm, 0823 2030, 221 North LaSalle Street, Chicago, IL 60601, USA.

September 18-23 Applications of numerical software, conference institute of Mathematics and its Applications, Southampton University of Southampton, Brighton.

Soccer

THE position at the top of all three divisions of the Summer Computer League is getting very exciting as teams approach the end of the season. The championship of the division seems to have developed into a straight fight between two teams and things are not likely to be decided until the very last game.

In division one Judpy is the favourite with eight points from four games, although it has struggled to beat two low placed teams, EUS and Southwark. Gryphon is top with 10 points but it has played six games.

In division two Ontons has been second-placed. Xerox to go two points clear with a game in hand.

Although ICL both have 10 points from six games in division three. Both teams have to play British Rail but in their other match Altago should have little problem with BIS while ICL faces Altago.

NRDC directors

THREE new members have been appointed to the National Research Development Corporation. The three, appointed by Industry Secretary Eric Varley, are John Scholes, formerly manager of the corporation's computers and automation group and now engineering director, Steven Doherty, the marketing director, who was previously with Arthur D. Little, and finance director David Thomson who was formerly with Alfa-Laval.

Michael Richardson-Burns, until recently a sales executive with ICL, has been appointed manager of ICL's client service centre (formerly Sales Computer Services) in Northampton. He replaces Bill Watts who moves to Birmingham as manager of ICL's commercial applications division.

COMPUTER WEEKLY

The following special supplements are due to be published during

AUGUST/SEPTEMBER

COMPUTING AND THE ACCOUNTANT

August 18th

In next Computer Weekly supplement, we have one of the best to make use of computer technology. Not only are computers used in a wide variety of accounting tasks but they can also be used to help you to make the most of your computer.

As well as providing an overview of the kinds of accounting tasks in which computers can be used, the supplement also contains a number of articles on ways in which the computer can be used to help you to make the most of your computer.

DISTRIBUTED COMPUTING FEATURE

Distributed computing - what does it mean? Is computer technology really for all? What are the security problems? How are users going to protect their distributed systems?

Answers to these questions will be found in the new Distributed Computing feature. Distributed Computing on August 25th, when users, suppliers and consultants will put their cases for and against the growing industry trend.

INTERNATIONAL EDITION + BONUS CIRCULATION

SICOB PREVIEW

September 8th

In September, Paris evaluates from its August holiday number to falling leaves and SICOB, one of the major European computer shows.

Computer Weekly of course has no summer rest and our international edition in September will be filled with the usual wide range of coverage of the world computer scene, including a special preview of the year's SICOB. Where Computer Weekly will be exhibiting for the first time and additional copies of the special edition will be distributed from our stand. With an associated seminar at 9.00 AM on 7.30.77, the issue will provide an ideal opportunity for you to meet the editors and discuss your views on the computer industry.

LOCHORN AND WATSON

Stephen Watson 01-261 8232, Tony Lochorn 01-261 8022, Brian Watson 01-261 8108, Lloyd Colthe 01-261 8107.

MILANO

Step Press: Computer Weekly continues to publish more practical and more relevant advertising and has a higher fully registered circulation than any other computer publication. Additional 2,000 copies will be sent to the 10,000 registered subscribers of the INTERNATIONAL EDITION which is published the 2nd week of each month excepting August and December.

USER FORUM

Whether to buy, hire, or lease...

WHEN you have looked at all the computers on the market and chosen the one that seems to match your computing needs, don't relax because the selection job is still far from over. For the differences between the manufacturers' payment conditions could well put you off your first choice, whatever the computer's technical merits.

The first decision to make is whether to buy, hire or lease the computer. Leaving aside tax and other accounting considerations which will vary according to users' circumstances, the decision on buying outright could depend on the length of time the computer is to be installed, when the money is paid, and how much protection the customer has from any price rises which might be made between the time the computer is ordered and the time payment is due.

The sale-to-hire ratio varies considerably. ICL hire customers pay the purchase price of their computer after about 45 months of hire payments. A 36-month period is put on items with relatively short lives such as terminals which might get a physical hammering.

At Honeywell the period is between 45 and 50 months; at IBM it is about 40 months but depends on the type of contract; at NCR a standard 48 months, while at Burroughs the period is between 55 and 60 months. Control Data said the period varies by configuration.

All the periods refer to hire charges only and exclude maintenance.

If you buy outright you pay the delivery time price to ICL, NCR and Burroughs. Honeywell customers are protected from price rises in the last three months before delivery, and IBM customers get six months' protection.

Control Data customers pay the price current at the time of ordering, but they also pay a supplement linked to the price of the dollar in the UK at delivery time.

The time the money falls due also varies a lot. Burroughs, Honeywell and IBM are paid on acceptance of the computer, while ICL customers pay 75% of the price on delivery and the rest on acceptance. NCR asks for a 10% deposit at order time and the rest on delivery, while Control Data describes its payment conditions as flexible; if users want to pay in advance because of advantageous dollar exchange rates, they can.

Standard hire contracts range from one year at ICL and two years at Honeywell, to two, three and five years at Burroughs, and one, three and five years at Control Data. IBM offers a number of rental plans. There are no standard length contracts at NCR, but customers have to keep their machines for two years before changing them.

An alternative to outright purchase or hire is leasing. In this case a leasing company buys a computer from a manufacturer and leases it to the user. The leasing rates are normally lower than the manufacturer's hire charges, but the customer usually has to sign to use the computer and thus pay the leasing company for five years or so.

A fairly common practice is to buy from a manufacturer, sell to a leasing company and then lease the computer back. This means the customer has built the computer and the cash, although it looks to the manufacturer as though the user owns the machine.

Epoch tape stretches to 3,600ft

THE Epoch 4 magnetic tape made by Graham Magnetic in the US and sold in the UK by the London based firm Allison Computer Media, is now available in lengths of 3,600ft. Because of the thinner mylar which is normal on tapes of such lengths, the 20-year guarantee available with the other Epoch 4 tapes does not apply.

Allison says that the unique Epoch 4 binding system makes it 80 times tougher than other tapes and reduces headwear by 95%. In the US Epoch 4 tapes have gone through more than two million passes without error under controlled conditions at a government test site.

Allison has also introduced a nylon ribbon suitable for the Diablo Htype II daisy wheel printer. The ribbon, made in the US by Pellikan, is in a cartridge and measures 6.35mm by 20mm.

PROFILE: ICL International Retail Users' Association

THE ICL International Retail Users' Association was formed in 1973 at the suggestion of Singer, before computer operation by ICL. And the withdrawal by Singer from the point-of-sale business was one of the main reasons for the present strength of the association.

The value of a collective voice, particularly for smaller users in countries with only a limited number of point-of-sale installations, was immediately apparent, says Philippe Lacamp, the association's chairman. "We ensured that third party maintenance contracts were arranged, and we fixed up support in the form of documentation or people, for users who were in the middle of installing systems."

Lacamp says that although a sense of relief was felt at ICL's assurance of continued support, the association has found, for example, that ICL maintenance charges varied by 18% between countries. The association negotiated a reduction for users paying the highest rates, while the lowest rates were unchanged.

In addition the association has persuaded ICL to provide full maintenance cover six days a week. This is particularly important for retailers, who have their busiest times on Saturdays.

The association is now pressing for greater reliability of data collection hardware and for more advanced software for data manipulation.

There are about 80 members in Europe including departmental stores, cash and carry stores, food shops, but excluding food shops because the volume and short life of low-priced products means that these shops take a different approach.

Discussions are in hand on the possibility of the association becoming part of the ICL Computer Users' Association.

USER VIEW

MEMBERS of the Data Recognition Users' Association had the first of a series of informal talks with senior managers at the company last month. Managing director Roy Roper is seen here describing Data Recognition's 9300 optical mark reader. The association's secretary John Stanfield, from J. Sainsbury, is on the far left. Other association members who attended the meeting were representatives from Shell, Charing Cross Hospital, Waddingtons and Devoe Cassy Croul.

Unhindered access to computer for the internal auditors

THE auditing of systems has on computers has cropped up again this month with a survey of local authority installations by the Local Authorities Management Services and Computer Committee.

But, says Lamasc, internal auditors are showing little inclination to take up the challenge of using the computer both as their hunting ground and as their most effective tool.

"Among the negative reasons given were difficulty in forecasting the scope and direction of future development, inadequate staffing of the audit department leading to inability to cope with the workload, and finally the absence of rules to guide auditors in the use of computers in audit work."

All the installations agreed that auditors should be involved at the system design stage, but many thought that the existence of a record on a file was sufficient proof of a transaction.

As Lamasc points out, the record's existence does not necessarily indicate whether a link or audit trail exists between records belonging to the same event on different files and hence does not guarantee that the programs work properly.

The survey found that at one installation "internal audit only called for complete file print-outs and very rarely attempted to trace transactions through the computer system."

The lack of auditors' experience of computers could explain the survey's finding that the computer console log and database management system logs are rarely used to follow audit trails. Lamasc describes the console log as "by far the most important source of information".

The installations questioned generally agreed that the ideal situation would be for internal auditors to have unhindered access to the computer and possibly even take it over at auditing times.

The audit reviews would best be done using a display terminal to look at files and trace transactions through application and operations systems. This could be carried out with little interruption to the workflow.

However, as Lamasc points out, this approach depends on the internal auditors having wide experience of computer systems. Despite this the industry for closer co-operation between computer departments and auditors there is little sign of auditors gaining that experience.

NCC guide to contracting for a successful installation

NEW ammunition for users in the battle for better installation contracts has been provided by the National Computing Centre in the form of a 25-page guide to the contract conditions customers should consider when discussing a potential order with a supplier.

But whether the guide will enable users to get better contracts remains to be seen, for manufacturers are often unwilling to accept amendments to their standard contracts. A survey by the IBM Computer Users' Association showed that none of the 650 members had won any change in the standard contract.

These findings are backed up by a comparison of manufacturers' responses to requests for additional contract clauses. The comparison was recorded by Dick Brandon and Sidney Segelstein in their excellent book on contracts (CW, October 14, 1976). Out of a possible score of 275 Univac got 220. The closest after that was Burroughs with 150 and Honeywell with 113. IBM scored 65 and the standard contract was a poor last with 10.

The NCC guide points out that "failure through lack of information has caused installations to come to grief because the customer had been overlooked in the contractual arrangements".

It adds that the computer

Disreputable distributors

PROTECTION for users against disreputable distributors of computer stationery is the aim of the recently-formed National Business Forms Marketing Federation.

The federation says membership is open only to "those bona fide operators who offer reliable personal service backed by proven business expertise and finance, who are able to provide flexibility in obtaining the best product and terms to suit individual companies' needs, and who have the capacity to retain stock lines to meet demand as and when it arises."

A federation spokesman said there were some disreputable distributors, and small computer users who did not use much stationery could get caught out.

The federation is vetting companies which have applied for membership.

Users wanting a list of companies with the federation's stamp of approval can contact it at Bank Chambers, 211 Lower Addiscombe Road, Croydon CR9 6BH.

Word processing for £75 a month

WORD processing systems are now available from Seggison Investments for short-term rental at about £75 a month. The machines are refurbished SE500 automatic typewriters with paper-tape punch and reader, or with magnetic card input/output, and the minimum rental period is three months.

Part 7

DATA 1	KEY 1	KEY 2	KEY 3	DATA 2	KEY 4	KEY 5	KEY 6
--------	-------	-------	-------	--------	-------	-------	-------

Figure 1a (above): Serial File. Note that keys may be appropriate for more than one record. Figure 1b (below): Note that data will be referred to by the

KEY 1	ADDRESS OF DATA 1	ADDRESS OF DATA 2	ADDRESS OF DATA 3	ADDRESS OF DATA 4	KEY 2	ADDRESS OF DATA 1	ADDRESS OF DATA 2
-------	-------------------	-------------------	-------------------	-------------------	-------	-------------------	-------------------

MOST data processing applications use a single record key, or at most a limited number of keys. The type of application in which a selection is made from a set of records, based on some input requirements, is an exception to this. There are no longer any particular "keys" as such; instead, the record has to be searched using some combination of keys provided by the user.

Typical selection applications might be personnel or library handling. In the first case, a group of FEMALE employees who can SPEAK GERMAN and are UNDER THIRTY might be required. Employee records would be scanned, using the boolean conditions (female) AND (Speaks German) AND (under thirty). Records satisfying all three requirements would be selected.

The keys above are fairly definite, although "can speak German" may prove to be a variable ability. In library

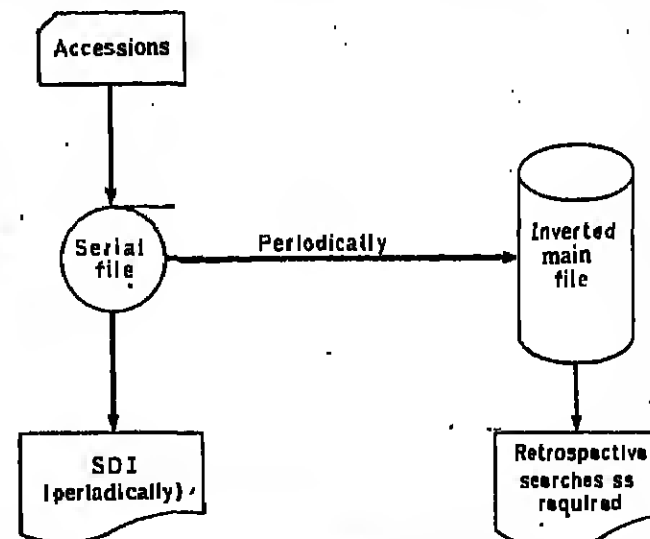

Figure 2: A system that uses both serial and inverted files. The main file need not be updated with the same frequency that SDI reports are provided.

applications keys are far more subjective. The easy way to define keys is to use the significant words in the title. However, titles may be intended to be striking rather than informative. Even author abstracts can be misleading.

The safe way to select appropriate keys is to have each article, book, etc. examined by an information specialist in the field, in order to allocate the keys.

However much care is taken, information retrieval is likely to lead to some irrelevant articles being selected and some relevant ones being missed.

Selection of records will be on the basis of boolean conditions such as AND, OR, BUT NOT IF. There should also be provision to broaden an inquiry if no records match the original conditions, or to narrow it if too many records are selected.

Order of keys is also important. MANAGEMENT INFORMATION SYSTEMS are not usually INFORMATION MANAGEMENT SYSTEMS. Other desirable facilities are that synonyms should be acceptable in MAIN or CORE STORAGE/MEMORY.

and that root words such as INTEGRA*** should yield a hit with integral, integrate, integrated, etc.

Computer systems that provide these functions require specialist files and record formats. All possible keys must be in a predetermined position or sequence, in order to allow searching to be carried out. The format depends on the type of file used.

Serial file handling

The simplest arrangement of records is to store them in order, with the record first followed by all its keys, in the format shown in Figure 1a.

This file organisation has the advantage that addition of new records is straightforward; they are added at the tail of the file. It is also convenient for boolean testing, as the records are examined one by one to see if their keys meet the conditions laid down.

The disadvantage of this

record is added, if any of the keys of the new record have been used previously. Larger work areas are needed for boolean operations, which limits the complexity of the logical expressions that are allowed.

For many applications — personnel, computer dating, etc. — choice of file organisation is a matter of file size. The typical library application is rather different.

Two services that are well suited to computer systems are a Retrospective Search through the whole of a library, and the selective dissemination of information (SDI) that aims to let users know which new additions to the library collection are of particular interest to them personally.

In the second case each user will have a separate profile of interests, in the form of a boolean expression that is run against new accessions.

The two are different in that an SDI service will handle relatively small files, and a retrospective search usually deals with large ones. A number of commercial systems use the technique shown in Figure 2 to batch input, so that updating of the main file is relatively infrequent.

These services can be useful for personnel type applications, but their main use is in libraries, where a further problem will be the relevance of the retrieved information.

Accession lists are often discarded because pages of irrelevant material have to be read. However, most users would accept one useful article in three or four, and thus a relatively low relevance, defined as (number of relevant documents) ÷ (number of documents retrieved).

Missing relevant articles because they are not retrieved by the system is a more serious problem. This is measured by recall, defined as (number of relevant articles) ÷ (total number of relevant articles). As the user gets no indication of articles the system has failed to locate, it is important that most of the relevant articles should be retrieved, even if this means that the relevance is lowered.

A system will give different results for different inquiries. But the curves shown in Figure 3 are typical of good and bad systems in operation.

Figure 3: The system will be run with high recall and relatively low relevance to avoid loss of information.

LETTERS

Lack of interest in operations room

I REFER to Wde Bruce's letter (CW, July 23) and would agree in principle that indeed there is a great lack of technical knowledge in the operations room, but would debate that the cause is not lack of formal training but prominent spathy or simply lack of interest.

ICT, after all, provides the 1900 operator with courses and manuals which should leave him with all the knowledge of operating, direct access and utilities he is ever likely to require as an operator. Anything else he picks up may well be interesting and a bonus, but effectively it is of little practical use to him, and can also be very dangerous, as Mr Bruce has shown.

PLAN is a very low level

Information please

I AM searching for information and/or programs concerned with the automation of the design of crossword puzzles.

I believe some research work has been done in the US, but as yet I have been unable to locate references.

I should be most grateful if any of your readers could provide information.

(Mrs.) E. HOCKLEY, Technical Librarian, F. International Ltd., The Bury, Church Street, Chesham, Bucks. HP5 1LB

Repudiate article — plea to BCS

I WAS surprised and intrigued to find that my letter (CW, July 7) drew forth such a prompt reply, and one from so high a level as the president of the BCS (CW, July 14). However I was disappointed to find that the second of the questions which I endeavoured to answer was one which I had never asked at all — "Why does the BCS have a marketing committee?"

As far as marketing committees are concerned I was not so much interested in posing the very obvious question of why do they exist ("to make money to hold down net costs to members"), to quote the president's own words, as in obtaining views of their relevance in the context of professional organisations such as the others which I mentioned.

Nevertheless, his first and third answers proved most gratifying. It is good to know that the BCS does not claim that membership in itself is necessary or sufficient proof of competence,

and recognises the value of "the (impartial) subjective measures of individual interest, judgment and choice".

It is also good to know that the higher echelons of the Society do not see its role as being solely concerned with the protection of its members' interests.

All that now remains is for the BCS entirely to repudiate the article which originally provoked the correspondence (CW, June 23), in which a spokesman appeared to suggest that this was the case with his claim that "The only safe way open to employers" in the matter of employee selection was to choose members (including student members) of the BCS in preference to outsiders, and we can rest assured that the Society is indeed living up to its president's fine words.

K. A. JOHNS, Welsh National School of Medicine, Cardiff.

language and as such can be very "hinky". By the same token, however, it is very powerful and has a great many facilities. It is not the easiest of languages to master. After about two years' good programming experience one can call oneself a PLAN programmer with reasonable confidence.

I make this point to try and illustrate the danger in an operator with no experience of programming attempting to analyse the efficiency of a live program and then suggesting tuning methods to improve it when perhaps all it does is display a little too often or seems to be taking longer than usual. The causes could be as simple as year end processing, holiday pay additional calculation, etc.

I am not saying that all programs are efficient. Indeed I agree that there will always be inefficient user programs.

In some cases the reasons may be unavoidable; in others it could well be bad program design, inferior coding etc. But it is not the responsibility of an operator to determine the cause. I think the reasons for this are fairly obvious.

Systems tests, proving runs, operators' comments on the run sheet are all areas where inefficiencies can be highlighted. The proving run is perhaps the best example, when a system is being proved for operational acceptance. This is designed essentially for comments and observations from the operations department.

Finally there could not be a

great deal of control in Mr Bruce's installation before the operators can suggest program amendments to programmers. Surely the right way to do this would be via the operations manager and chief programmer who can then determine whether an amendment is justified or not. After all programmers are allocated work just like operators.

What would happen if a programmer went into the machine room and said, "Could you just run this little XPL for me, it won't take a minute"? I think the response to this approach is fairly common throughout most installations!

Leave the PLAN programs to Mr Bruce and stick to your UDAS and DIRECT ACCESS manuals.

FRANK WILLIAMSON, Chief Programmer, Lawsons

Aberdeen.

Progress of Ovshinsky

THE story headed Memories with the Speed of Light (CW, July 21) reminded me of Ovshinsky's extraordinary career. Ovshinsky contravened the sociological norms, firstly by being a self-made man rather than an academically prestigious researcher, and secondly, by allegedly unconventional procedures associated with the publication of his milestone article (Phys Rev Lett 21, 1430, 1968). His research may have been controversial, but the behaviour of the establishment towards him was undoubtedly affected by the above factors.

In an analysis I carried out of literature on amorphous semiconductors (J Amer Soc Info Sci 25(2) 1974), I ventured an opinion, formed by studying the literature network, that Ovshinsky's work may not have been judged solely on its merits.

An interesting facet of the specialty was a change which became evident around 1973. Until that time most of the articles had been authored by academics. Articles then started to emanate from companies and often included the word application in their titles. This indicated that practical devices were emerging from the research. Your article indicates a further movement in that direction.

A. E. CAWKELL, Director of Research, Institute for Scientific Information, 132 High Street, Uxbridge, Middlesex, UB8 3DP.

Seeds of destruction....

DR. CHRIS EVANS missed a vital point in his review of the history of electronic calculators and the developments now in view (CW, July 7). The obvious advantages of cheap, quick, convenient devices, with all sorts of gimmicks, additions, carry the seeds of destruction for personal numeracy.

Mathematicians, engineers, statisticians, etc. use calculators as a tool, the same as writers use pens, typewriters, dictaphones and so on. The latter do not forget grammar or spelling; the former do not lose their basic understanding of the maths.

However, for most people — and I include most who use computers as opposed to building the hardware or software — the use of the calculator for all sums seems to be destroying the hard-won skills developed with great difficulty at school.

These skills are not just useful for examinations but give automatic understanding of major parts of our complex society. Innumeracy is at least as great a problem as illiteracy, but less noticeable.

Dr. Evans should, as a psychologist, be advocating urgent research into the deleterious effects of using calculators on ordinary people's perception of numbers.

Old people cannot understand kilos, pence and so on today. The next generation may have even greater difficulty understanding 2+2 without their personal black box to help.

R. G. HARRISON, Woodlsey, Berkshire.

COMPUTER MANAGER
(Male or Female)

Required to join a developing computer installation currently based on a 1901A with discs but planned to be replaced next year.

Applicants should have a sound data processing background in systems and programming, a knowledge of on-line techniques and to have implemented at least one successful commercial system.

The successful applicant will play a major role in the selection of replacement hardware and development of on-line systems.

This is an excellent opportunity for a self-motivated person with the required experience to join a progressive company with opportunities for advancement within the G.K.N. Group.

An attractive salary is offered, together with four weeks' annual holiday, a contributory pension and life assurance scheme.

Write in confidence giving relevant personnel and career details to the Personnel Manager, THE FIRTH COMPANY LIMITED, Wire Manufacturers, Nore Street, Warrington WA1 2JH.

GKN-Britain's largest international engineering group

SCOTLAND & NORTH-WEST

Technical/Customer Support £5k to £7k + Co. Car. 2 years experience required. Relatively on a variety of M/F Frames Based General Scotland

Senior Systems Analysts to £5.5k + Mortgage + Benefits. Various Commercial applications, numerous fringe benefits. Based Edinburgh

Program Designer to £4.7k + immed. subsidised mortgage. Various Commercial applications, numerous fringe benefits. Based Edinburgh

Cobol Programmers, circa £3,500. 2 years experience, general on other financial or commercial applications. Based Edinburgh

PL/I Programmers, circa £4,000. Technical Support Function within Software Pool for a manufacturer. Based Manchester

Cobol Programmer, to £4,500. General opportunity to gain in-depth knowledge of Cobol/PL/I on an IBM 4340 system in rural Cheshire. Generous relocation package

dean associates

Abadan Institute of Technology

SYSTEMS & APPLICATION PROGRAMMERS

To teach at Assistant Professor/Professor level in Computer Science at Abadan Institute of Technology in Iran.

This is a two year contract with a salary of £8,700-£14,500 net per annum, depending on qualifications, together with housing, travel expenses and other benefits.

Applicants should have a Ph.D. or M.Sc. in either Computer Science, Applied Mathematics or Electrical Engineering with a minimum of three years industrial and teaching experience. Preference will be given to applicants who are familiar with the Univac 1100/11 system.

Applications should be sent to:

The President, Abadan Institute of Technology, Abadan, Iran.

RESEARCH POST IN THE SOCIAL RESEARCH UNIT
(Full-time or Part-time)

Supported by the Medical Research Council, for a person with computing experience to deal with programming and data handling work on projects concerned with social factors in the onset and course of psychiatric disorder in women.

Initial salary for a full-time appointment would be within the grade range of £3,727-£4,445 p.a. according to experience. Applications with C.V. details to Senior Assistant Secretary (Personnel), Bedford College, Russell's Park, London NW4 4AB.

INNER LONDON EDUCATION AUTHORITY
RESEARCH AND STATISTICS DIVISION

PROGRAMMER (P001 A) Salary scale £3,088-£4,064 inclusive. London weighting and Phase 1 allowance plus the allowance of 5% of total earnings payable from 1.7.77, under Phase II of the Agreement. A Statistician/Programmer is required to join a team responsible for the provision of a statistical and computing service to research workers and administrators.

Applicants should have a degree, a professional qualification or computing experience. A knowledge of Fortran and IBM machines is desirable. Details and application forms from the Education Officer (EO/Estab 2A/1), Admissions Street Annex, The County Hall, London SE1 7PB. Please enclose a stamped self-addressed envelope. Forms to be returned by 24 August 1977.

DATA PROCESSING CONTROLLER + Benefits

The Data Processing Controller with some knowledge of systems and programming is required by the Institute of Personnel Management to assist its Members in their work. This is a part-time position with a commensurate salary up to £3,750. LV 151 per day and 4 weeks holiday.

Applications in writing to J. T. ELLISON, General Administration, Institute of Personnel Management, Control House, Upper Woburn Place, London WC1.

Knight CONTRACTS
Operators Programmers

If you have at least 2 years' operating experience you'll be interested in our range of contract vacancies. Here are some immediate requirements:

IBM DOS GRASP OPS - LONDON/HERTS/SURREY.
IBM DOS VSI OPS - LONDON.
IBM VM/370 OPS - KENT TOP RATES.
ICL SYS 4 & 2900 OPS - UK & ABROAD.
ICL GEORGE III Shift Leader - Kent.

IN EUROPE

IBM OS/360 WRITERS are required for a long-term contract commencing in September. Knowledge of French would be a distinct advantage — there's a very attractive salary, and the setting is LUXEMBOURG.

Whether you're looking for contracts here or abroad our co-ordinators are always willing to advise.

For further details on these and forthcoming contracts please call Sue Smyth, June Mogg or Pat Eagling NOW on 01-491 4706.

Knight RECRUITMENT

PROGRAMMER/ANALYST NEW MACHINE DEVELOPMENT! A top management position in a leading company. You will be responsible for the design, development and testing of new machine programs. You will be responsible for the design, development and testing of new machine programs. You will be responsible for the design, development and testing of new machine programs.

Essential requirements for the job are proven experience in developing COBOL based commercial systems and a degree. A high degree of technical competence is essential as is the ability to deal effectively with the firm's clients. The job will be based in modern offices in SE1. Ref. JP142.

CONSULTANCY SYSTEMS SUPPORT SPECIALIST TO £7,500. For a permanent position in a leading support group.

He/she will be responsible for developing and supporting software packages for use by clients in the UK and overseas. Supporting a number of client integration packages used to assist in the field of business. Developing other computer based audit techniques, writing test packages and maintenance, and a strong knowledge of the technical aspects of handling advanced computer systems.

Essential requirements for the job are proven experience in developing COBOL based commercial systems and a degree. A high degree of technical competence is essential as is the ability to deal effectively with the firm's clients. The job will be based in modern offices in SE1. Ref. JP142.

SENIOR COMPUTER AUDITOR

A vacancy has arisen within the Internal Audit Department for a Senior Computer Auditor. The position involves the following aspects:

- Investigation of Computer Held Information.
- Participation in Feasibility Studies.
- Regular reviews of existing Computer Systems.
- Audit participation in the development of new Computer Systems.
- Monitoring of Computer activities.
- Liaison with Audit investigations.

Applicants should ideally have considerable experience of both Audit and Computer activities. The Region runs an extensive ICL 1900 installation, demanding knowledge of PLAN AND COBOL languages and ICL activities in general. Knowledge of the NCC FILATAB package would be an additional advantage.

Some travel throughout the West Midlands may be necessary, although the position is largely based at Headquarters in Solihull. Applicants should preferably hold, or be studying for, an accountancy qualification. Salary is within the range £4,278-£5,176 per annum plus £312 p.a. supplement. Please apply in writing quoting Ref No. CW/A313 to:

Senior Personnel Officer (RQ & Marketing)

West Midlands Gas, Wharf Lane,

Solihull, West Midlands.

WEST MIDLANDS GAS

SENIOR PROGRAMMER

Salary range: £5,010 to £5,480 p.a.

A computer-based, centralised signalling control system is currently being implemented on the Northern and Victoria Lines. We need a Senior Programmer to work as a member of the implementation project team producing the application software.

Experience in real-time systems is essential, but applicants must also be able to demonstrate at least three years' proven practical experience in programming in both high level and assembler type languages. An appreciation of systems analysis and design techniques is very desirable. A qualification leading to membership of a recognised appropriate institution of Society is also desirable.

If you are interested in being considered write to Staff Appointments and Development Office (Ref 270/C/CM), London Transport, 55 Broadway SW11 0BB.

LONDON TRANSPORT

JBA

SPL International needs Commercial Programmers and Analysts to work on a variety of projects awarded recently to our U.K. Information Systems Division.

Vacancies are mainly in London but, with our overseas business now accounting for more than 50% of revenue, opportunities to work abroad arise frequently.

These positions will appeal to people:

- * who wish to further their experience by working for one of Europe's largest Software Houses
- * who are prepared to be mobile and learn new skills
- * who see themselves spending a period abroad during the next phase of their careers.

★ Junior Programmers up to £4,000

If you have at least 1 year's experience in a commercial programming environment, preferably with some Assembler knowledge as well as a high level language such as COBOL or RPG, we are interested.

★ PL1 Programmers up to £5,000

We also have a continuous need for programmers who have at least 1 year's experience using PL1.

★ ICL/Singer System 10 Programmers up to £5,000

If you know this equipment we have vacancies based in Manchester and Bristol as well as London. Interviews can be arranged locally.

Fluency in a major European language is always an advantage for overseas work. All salaries by negotiation according to experience. Excellent fringe benefits.

To discuss these or other opportunities and to arrange interviews apply to:

SOUTH WESTERN INDUSTRIAL RESEARCH LIMITED
18 W 16 41
(University of Bath)

PROGRAMMER

Applications are invited from experienced graduate programmers to work for SWIRL, a consultancy company based at the University of Bath.

The Programmer will work in conjunction with staff of the University Computer Unit on the development of computer applications for research and development projects undertaken by SWIRL.

Salary will be within the range £2004 to £4011 per annum.

Applications should be sent to the Personnel Office, University of Bath, Claverton Down, Bath, quoting reference number 77/84. Closing date will be Friday, 18th August, 1977.

Thinking of the benefits of working for a growing company? You must be thinking of Systime.

Systime is established as a major U.K. supplier of mini-computer based business systems. Its consistent growth enables the right people to extend their responsibilities, experience and earnings. Its consistent success ensures a working environment that is dynamic and exciting.

REGIONAL PROGRAMMING EXECUTIVES

to head up the Northern and Southern development teams from offices in LEEDS and WALLINGFORD respectively. These are management positions which carry responsibilities for staff development, staff allocation and quality control. Salaries will reflect the responsibilities and company cars are provided.

Applicants must have proven experience in projects or programming management, possibly acquired with a software-house or manufacturer.

EUROPEAN SOFTWARE EXECUTIVE

to be based in the LEEDS or WALLINGFORD offices. Responsibilities will include the evaluation of customer requirements, software contract negotiation, the formation of project teams and subsequent project management for our rapidly expanding customer base in Europe.

Previous experience as a project leader in the development of commercial mini-computer systems is essential and a knowledge of French and/or German would be advantageous.

With our continuing U.K. expansion we require additional, experienced personnel in the following offices: LONDON, WALLINGFORD, LEEDS, MANCHESTER, LEICESTER, GLASGOW and DUBLIN.

PROJECT LEADERS

with proven ability to manage a commercial systems development team: mini-computer experience is preferable but not essential.

ANALYST/PROGRAMMERS

with a minimum of four years commercial systems and programming experience.

PROGRAMMERS

with commercial programming experience, preferably in a mini-computer or real-time systems environment.

We currently have personnel working on customer premises in HOLLAND, BELGIUM and WEST GERMANY. There is an immediate requirement to extend this support and we are particularly interested in personnel who join us in the UK with a view to subsequent assignments in Europe.

CONSULTANTS/SUPPORT SPECIALISTS

are required to join the Applications Support Department based in LEEDS. Their functions will include the development, marketing, implementation and technical support for commercial packages in one of the following areas:

Administrative Systems—personnel information, time recording and word processing.

Order Entry and Stock Control Systems—with the emphasis on retail and distribution operations.

Motor Dealer Systems—include finance and accounting, parts control and service warranty.

Program Development Aide—Software generally, though not exclusively, written by Systime to assist customer program development.

All four positions afford the opportunity to head up a section and require personnel with previous project leadership experience, preferably on mini-computer or real-time systems.

SYSTEME
REAL-TIME COMPUTER SYSTEMS

Write giving career details, to D.H. Montgomery, Systems Director, Systime Limited, Concourse Computer Centre, 432 Dewsbury Road, Leeds LS11 7DF, or phone the Systems Secretary on Leeds (0532) 707411 for an application form.

Training Officer

c £5000

Centre-File Limited, is a member of the National Westminster Bank Group and one of the largest Computer Bureaux in the country. We operate a wide range of real-time, batch and custom built services for, amongst others, stockbrokers, building societies and industrial and commercial organisations, many of whom are household names.

Currently we are looking for an experienced training professional to join our established Training Section, who would be able to contribute effectively in the development and presentation of the Company's training requirements, and the administration of the overall Company training objectives.

The ideal candidate should have had previous experience in the development and organisation of Computer Programmer and Operator training, as there is a continuous policy within the Company to train our own technical staff. They should also be able to show initiative and the ability to communicate with staff at all levels.

A starting salary in the region of £5000 is envisaged, together with an attractive range of fringe benefits, which includes a Company Pension Scheme and Preferential Loan Facilities.

Centre-File Limited

Please write with full career details to: Mike Atkinson, Personnel Department, Boundary House, 19-22 Furnival Street, London EC4A 3JU.

A member of the National Westminster Bank Group

A MEMBER OF THE DEXION GROUP

We have a well established and growing new Unix 80/80 at our London Data Centre in Hammermith. It will be supporting a major on-line system and we need to supplement our existing operations staff to cope with this extra workload. Candidates should have the ability to maximise throughput in a busy multi-processing environment and be able to communicate with staff at all levels.

SHIFT LEADER

to £4,750 Inc. As shift leader you will have had a good Univas 8000/series 90 or IBM 3807370 background. You must be at least S/L or Snr. Op. level at present and be used to running a shift and carrying all the accompanying responsibility.

We operate a 3 shift system, Monday to Friday and you will receive all the benefits associated with a large group. Including discounts and L.V.A.

Computer Personnel International

110 St. Martin's Lane, London, WC2N 4BH

PRESTON POLYTECHNIC

TEMPORARY LECTURER GRADE I OR GRADE II IN COMPUTER STUDIES OR PART-TIME LECTURERS IN COMPUTER STUDIES

The following appointments would be for one year from 1st September, 1977 to 31st August, 1978. Applicants would be expected to teach commercial data processing, and should be graduates with relevant practical experience.

Salary Scale: Lecturer I £2,813-£4,068 Lecturer II £1,744-£3,005

Applicants will also be considered from prospective part-time lecturers in data processing who may be required for the academic year 1977-78.

Application forms and further particulars may be obtained from the Civil Administration Office (Staffing), Preston Polytechnic, Corporation Street, Preston PR1 2TG. Closing date 26th August, 1977.

PROBLEM SOLVER

Up to £4,500

Based Hemel Hempstead

Oxon Limited, the leader in storage and materials handling equipment, require a Problem Solver to maintain and develop their work of design, pricing, engineering and drafting by using mini computers.

The successful man or woman should have one to two years' experience of programming in any high level language on mini computers. Knowledge of assembly language would be useful. In addition, the successful applicant should have sufficient technical background to learn Oxon design techniques.

This is a key job in which the job holder will have a significant impact on the company's efficiency and profitability.

Oxon Limited is a member of Design Comm International Limited, and conditions of employment are those expected from an international organisation.

Please write, giving full details of your career to date, to: David Adams, Personnel Manager, Oxon Limited, Oxon House, Empira Way, Wembley Park, Middx.

DEXION

Computer Personnel International

Britannia Building Society

2 SYSTEMS ANALYSTS

UP TO £4,500 + MORTGAGE

Come and join an organisation that is blazing a O.P. trail in a rapidly expanding industry

We have vacancies for two systems analysts to work at our Chiol Office in rural North Staffordshire.

The Britannia is the ninth largest building society in the U.K. with assets exceeding £850m and a national network of 140 branches.

We operate a large ICL System 4-72 to provide a real-time video service for our administrative departments as well as a complete batch system covering 750,000 investment and mortgage accounts.

Our MIOAS project will shortly go live, bringing on-line past book-updating terminals to our top 50 branches, using the latest modular terminals manufactured by Dataseq, the first such system installed by a national building society.

The ideal candidate will have:

- * At least two years O.P. experience including systems and programming
- * Knowledge of on-line systems
- * Experience of System 4 and Innoval systems

A salary in the range £3,500 to £4,500 p.a. is offered plus annual bonus, pension, mortgage scheme and other benefits: full details at interview.

Write for an application form to:

Mr. Ray G. Hewson,
Assistant General Manager (Personnel)
Britannia Building Society
P.O. Box No. 20
Newton House
Leek, Staffs, ST13 8RD

If you require more information, telephone Geoff Friction, Systems Manager, on Leek (0538) 86513.

occ computer personnel limited

Kent — rural location

IBM 370-OS
Data Centre

Good career prospects —
generous relocation package

The Data Centre of this international organisation provides development and processing facilities to group companies in the UK and Europe. Expansion in the work load of the group has led to the need for additional staff as described below.

The development staff are grouped into mixed teams of analysts and programmers — each responsible for new and existing systems on a continuous basis for the various group companies. The work is therefore a mixture of new development, trouble shooting, maintenance and enhancements. Financial and accounting applications form the bulk of the work.

Senior Programmers to £5,200

OS COBOL required

Senior Programmers will join a project team and will design, write and implant programs and, on occasion, will supervise small teams of programmers. A minimum of three years' programming experience is needed with a minimum of one year's OS COBOL.

Ref: 244A/CW.

Programmers

£3,500+

COBOL on ANY Hardware required

Programmers with a minimum of one year's COBOL experience on ANY hardware are required. Full training will be given in IBM COBOL, JCL, etc.

Ref: 244B/CW.

The Data Centre is housed in superb offices in the country and working conditions are excellent. The atmosphere is relaxed and friendly although high standards of work are expected. Career prospects are very good — both at the Data Centre and possibly by transfer to other group companies worldwide. The fringe benefits include a very generous relocation package, flexitime working, subsidised canteen and good social and sports facilities. Reasonably priced housing is available within easy reach.

To apply for these positions, or for further information, please write or phone asking for Neville John. Day: 01-242 9356. Evenings: Farnborough, Kent (66) 52017. If you are interested but you are not sure if your experience is appropriate, please ring for an informal discussion or interview.

Interviews outside normal office hours can be arranged if more convenient.

A Future in Computers

Based at Slough, the International division of this very successful mini computer vendor has immediate vacancies for experienced Sales Executives, Area Support Specialists and Product Support Specialists to market and support its products in areas of Western Europe, the Middle East and Africa, where the Company is actively establishing its presence.

These are challenging positions requiring a high degree of personal initiative and drive, sound technical knowledge and the aptitude and resilience to operate successfully in international markets.

INTERDATA

A UNIT OF
PERKIN-ELMER DATA SYSTEMS

Interdata House, 227 Bath Road,
Slough SL1 4AX, Berkshire, England.
Telephone: Uxbridge 62441

Sales Executives

These positions are UK based, and require extensive travelling. Opportunities could arise for successful salesmen/women to relocate overseas if desired.

Only experienced and successful mini computer salesman/women need apply. Although international experience is not mandatory it would be a strong asset.

Remuneration would be high and on-quota earnings would not be lower than £12,000 for the right applicant.

Contact Mario Guzzetti—
Sales Manager

c£12,000

Area Support Specialists

An Area Support Specialist is responsible for technical support in a designated group of countries, therefore overseas travel on short term assignments will be involved. He or she provides liaison and high level support from the International Headquarters in the UK to the local support groups.

The position calls for the ability to handle large projects, formulate proposals, run benchmarks, make technical presentations on our software products, and involve all pre and post sales support.

The Company operates in both the Commercial and Scientific markets and Area Specialists must build an all-round knowledge of the Company business areas and products.

Candidates should have at least 5 years O.P. experience with mainframe and/or mini computers, with ideally a knowledge of COBOL, FORTRAN and ASSEMBLER.

Contact Keith Hobson—
Sales Support Manager

£5-7,000

+ Car Allowance

Product Specialists

Product Specialists provide detailed support in their own special subjects for the international area. They are the experts for proposals, installations and problem solving.

Experience on other mainframe or mini computer systems in the following areas is desired:—

Communications software
Transaction processing systems
Database systems
COBOL (different implementations)
Operating systems.

These are ideal opportunities for persons who wish to specialize, while retaining the benefits of travel and a wide variety of projects.

Contact Keith Hobson—
Sales Support Manager

£5-7,000

+ Car Allowance

JBA

Technical Author

Berkshire c. £8000
An international consultancy have a vacancy for an experienced applications software author. The successful appointee will enter a team environment, will be a self-starting, flexible individual with the ability to write clear and concise procedural descriptions. Senior programmers or analysts who can demonstrate a background of self-documented work will be considered.
Excellent fringe benefits are offered.

Contact: Mike Craemer

Technical Authors & Engineers

Home Counties/South up to £5500
A number of our clients are urgently seeking experienced authors (in some cases graduate trainee authors) to carry out documentation work on a variety of technical computer based systems, or commercial systems (with hardware or software bins). Experienced Computer Engineers, in field support or instructional areas are also sought.
Excellent staff benefits and prospects.

Contact: Mike Creemer

COBOL/PLAN Programmers

Middlesex up to £4500
A large international manufacturing company are seeking COBOL and/or PLAN programmers with at least 1 year's experience in industry. Recognised large main frame experience is ideal; applicants interested in rapid promotional prospects preferable. *Attractive company benefits and generous relocation package offered.*

FORTTRAN/RSX11 Programmer

London c. £5000
Our client, an international organisation, has a vacancy for a software specialist to work on new systems in the commercial area. Applicants must have several years experience in developing and competent in FORTTRAN using RSX11. A commercial or communications background would be preferred. This is an exciting opportunity to join a large well-known company.
Salaries negotiable. Excellent fringe benefits.

Contact: Margaret Stevens

Why are CMG always advertising for staff?

The computer services market in the UK and the rest of Western Europe is growing at between 25% and 40% a year. This is what is actually sold and not what could be sold if more resources were available. The growth of CMG since its formation in 1964 has been substantial - Turnover during 1975/1976 was £5.4 millions. To sustain our rate of expansion which is in line with market growth we will require at least thirty more people in our UK branches during 1977.

What's so special about CMG?

We are a young company committed to:

- Building a successful company, wholly owned by those working in it, where each person could "be his/her own boss," to the maximum possible extent.
- Paying high salaries, providing top conditions, and pension arrangements in order to attract the best people in the industry, in return for hard work and maximum opportunity.
- Organising the company in small manageable groups and units, where everyone can know everyone else, with maximum delegation of responsibility.
- To making all management appointments from within.
- Making all information about the company available to everyone, with no exceptions.
- Involving every member of the company in the decision making process through regular staff, management and policy forming meetings.
- Sharing profits, and enabling all staff to buy shares in the company.

What exactly is a Systems and Programming Consultant?

Depending upon the requirements of the project to which they are assigned, our staff may be called upon to use any or all of their programming, systems, management and general consultancy skills. We do not separate programming from systems work as far as job functions are concerned.

Whilst at times people will use their experience of specific machines, languages, and applications they will also be required to draw upon their general computing experience and learn new specific skills with the assistance of other experienced CMG personnel. We therefore require people whose prime interest is in developing systems and solving business problems rather than working with specific equipment.

The main job satisfaction is gained from getting work ready within agreed cost and time scales. There is a considerable amount of customer involvement and everyone is expected

to participate in the sales effort of the company. People are given all the responsibility that they can handle and there are unrivalled opportunities for promotion, all of which is from within CMG.

We require a minimum of two years programming experience. Experience on any commercial machine is considered relevant with experience of both mainframes and minis being preferred. Similarly the particular languages used are not important but we prefer a knowledge of both high-level and low-level languages, with COBOL and any Assembler language being the most desirable.

Experience of project leading, customer involvement, management responsibility and sales involvement are not essential for all vacancies but some or all of this type of experience would be required for the more senior positions.

We require experience with commercial and financial applications with general accounting knowledge being the most useful.

What experience is necessary for a CMG Operator?

At least three years' practical experience is essential with a knowledge of more than one type of computer being most useful. Preferably, you will have some experience of the responsibilities of working at a senior level. The ability to work with the minimum of

supervision is a basic requirement of our Operations Staff. The work will involve responsibility for optimising throughput and quality of the work produced on our Burroughs and Honeywell machines.

Where do I apply?

Please write or telephone for an application form quoting ref: CW/28 in:

Is a large international Consultancy and Systems Implementation group. In keeping with its prestigious reputation it urgently requires top calibre personnel to implement its rapid expansion programme and has retained Informatix to assist with their personnel requirements.

Technical requirements:

- A. Senior Analyst/Programmers having not less than 4 years' experience of design and implementation of Mini Computer systems for on-line and/or real-time applications involving Assembler level Programming in a Mini Computer environment.
- B. Analyst/Programmers having not less than 2 years' experience of Assembler Programming relating to Mini Computer applications.

Prerequisites:

Ideally candidates should have a professional qualification or a degree equivalent preferably related to Computer Science, Mathematics, Science or related areas. Significant D.P. experience may be acceptable in lieu of the aforementioned requirements.

SALARIES Cost-of-Living Allowance Plus
COMPRISE: Basic U.K. Salary to £10,000++
7% Holiday Bonus

The Prospects:

In addition to excellent salaries successful candidates will meet with technically rewarding projects and rapid advancement career prospects are open to those whose contribution enhance the prestige reputation and expertise of this group - a world leader in 'State-of-the-Art' systems implementation.

The Remuneration:

Generous relocation allowances will be paid to candidates and their families. Four weeks' paid annual holiday plus 7% holiday bonus is payable in addition to salaries adjusted upwards to meet cost-of-living differentials. Temporary accommodation will be provided at the outset pending location of permanent accommodation.

Interviews:

To be held in London throughout the month of August. It is anticipated that employment offers will be made to successful candidates within 10 days of interview. Ref. 36/1

Telephone 01-491 4636

Avon House, 360-366 Oxford Street, London W1N 9HA.
(Opposite Bond Street underground)
Telex: 28800 ALPRESS LDN.

Computer Operator c. £3000+25% shift allowance.

We operate on IBM 370/145 under OS/VS1 supporting batch and on-line applications. In addition there is a 370/148 scheduled for delivery in early November.

Because of this expansion we need another Computer Operator, who has at least one year's experience with OS/VS1.

A three-shift system is worked with weekend overtime as required. Working conditions and fringe benefits are excellent and relocation assistance is available if necessary.

For an application form ring Liz Gibney on Swindon (0793) 27812. (24 hour answering service).

SOCIAL AND COMMUNITY PLANNING RESEARCH

PROGRAMMER £4,500 +

SCPR, an independent research institute, require an experienced programmer to join a small team concerned with the computer analysis of surveys. Responsibilities include planning and executing the computing phase of a number of individual research projects. Good self-organisation is essential.

Experience of survey analysis would be an advantage but this is not essential provided willingness and ability to adapt to this application can be shown. Specialised packages are used for most functions but Fortran experience would be useful. Bureau computers are used.

A distinctive feature of the job is close liaison with the senior (non-technical) staff who design research and interpret its results; ability to communicate well is therefore essential.

Benefits include a 9-day working fortnight and 4 weeks' annual holiday.

Apply in writing, giving full details of education, experience and current position, to:

Stephen Elder, Technical Director
Social and Community Planning Research
18 Duncan Terrace, London N1 8BZ

OPERATIONS MANAGER/ESS

The Yeast and Food Division of THE DISTILLERS COMPANY LIMITED operates a 36K 2903 with 3 EOS 30 disk drives, 2 tape decks, card reader, line printer, 7502 Modular Terminal Processor and 8 Video Terminals.

An OPERATIONS MANAGER/ESS is now required to assume control of all aspects of Operating, Data Control and Data Preparation, with a staff of 17. The person appointed should have a mature personality, sound knowledge of 2903 operating and utilities, wide data control experience, and a capacity for hard work. Applicants must be willing and capable of assuming full managerial responsibility, yet maintain a flexible approach concerning their own daily activity.

In addition to a salary of £5,000 we offer lunch vouchers, four weeks' holiday per year, non-contributory pension scheme and removal expenses, if necessary.

Please apply to: Mrs. J. Clay, Personnel Officer, The Distillers Company Limited, Yeast & Food Division, Crown House, Mordant, Surrey. Tel. 01-542 6655.

COBOL PL/I or BAL PROGRAMMERS & ANALYSTS

CENTRAL LONDON & S.W. ESSEX

3 1/2 % MORTGAGE
GRADE 1 £5,500-£6,750
GRADE 2 £4,500-£5,500

A well established Financial Institution based in London with RJE facilities in S.W. Essex is seeking to recruit a number of experienced Analysts and COBOL/PL/I or BAL Applications and Systems Programmers with strong OS backgrounds. A minimum of 2 years' programming experience is essential and ideally exposure to either 370/135, 145, 155 or 158 would be advantageous. A strong background in Commercial batch processing is essential, whilst any on-line (CICS, IMS, etc) experience and data-base design would be desirable however, if necessary, training will be given in these areas. Successful candidates are likely to be able to demonstrate a strong ability for professionally documented programming procedures and senior applicants will have an in-depth knowledge of IBM utilities and JCL.

These appointments will appeal to candidates desiring to develop into on-line applications with the added benefit of subsidised mortgage. Flexible working hours and other good fringe benefits are added attractions. Interviews will be held in London throughout August and offers will be made to successful candidates.

Ref: 36/2

Telephone: 01-491 4636 until 7 pm

ANALYSTS + PROGRAMMERS

LONDON AND OVERSEAS GRADE 1 £5,500-£6,750

SALARY TO £7000+
Per Diam Allowance

An established U.K. Software House with extensive overseas operations is planning a major expansion programme and requires a number of Systems Analysts at various levels as well as experienced programmers. Ideally candidates shall have solid IBM OS backgrounds and programme will demonstrate experience in ANS COBOL (BAL would be an additional asset). In addition any experience within a Mini computer environment would be considered an advantage. In-depth exposure to OS JCL and Utilities is a prerequisite. These positions will appeal to applicants free to travel extensively overseas and to a lesser degree in the U.K. very generous allowances will be paid during such periods. These positions are permanent and opportunity within this progressive company. Interviews will be held in London throughout August and offers will be made to successful candidates within 1 week of interview.

CAREER OPPORTUNITIES IN NEW SERVICES COMPANY

Birmingham based

1900 Hardware

Salaries c £5000 +

The Company is a newly formed independent member of a large National Group, servicing the group's computing needs. So they can offer stability and security, along with the challenge of producing top quality work to an agreed timetable. The company's services are provided from a number of computer centres in the UK, of which the Birmingham centre is the largest, using an ICL 1903T with dataprocessing links. The company is actively marketing its services, and has need of top quality development staff. The vacancies all carry good benefits, and offer exceptional potential, as new advanced hardware is planned for the future. As the team is compact, these positions offer individuals the chance to make their mark on the company and to assist in the growth. They are all senior appointments, and the positions are as follows:

CHIEF PROGRAMMER

You will have 1900 COBOL experience, and be capable of running a team of several programmers. It is a management position, reporting directly to the Development Manager, and offers scope to bring high standards to the team. You will be responsible for allocation of work, standard of programming, implementation, progress reporting and close liaison with Production Management. Recruitment of new staff and their training and progression will also be part of this job.

SYSTEMS PROGRAMMER

Evidence of systems programming experience, including both high and low level languages, not necessarily ICL, is required. Driver, COMMS Manager, George 2 Plus and Maximop are all in use, and would become your responsibility. You would take control of all operations software, and advise on upgrades and new facilities. This is an interesting and challenging position, reporting to the Production Manager, and the future possibilities with hardware/software developments are most exciting.

SENIOR ANALYSTS

Because the Company has to sell its services to its clients, the ability to deal with them in a professional manner is required. You will be expected to carry out feasibility studies, investigations, design and implementation. The application areas, in addition to the normal commercial systems, include advanced specialised developments closely meeting the specific business needs of the company's clients. It is a project leading role, reporting direct to the Development Manager, and experience of scheduling and staff control would be useful. One post may be available at a more junior level.

Please contact Mike Hession (Ref. CW17) for a confidential discussion and appointment to your convenience

SENIOR SALES REPRESENTATIVE

We are Raytheon - manufacturers of computers, distributed processing and terminal oriented data communication systems for Airlines and Industry. Raytheon International Data Systems is responsible for the marketing, sales and service of its products in Europe, the Middle East, Far East and Africa. The Raytheon terminal systems are installed with over more than 80 airlines.

We are seeking a Senior Sales Representative who will be responsible for the sales and marketing of "Raycheck" - the new Departure Control System developed by Raytheon in close co-operation with leading airlines and airport authorities.

The person whom we are seeking should have at least 5 years experience in marketing with the Management Services

(D.P.) department of a major airline, or in selling of data-processing equipment to airlines and airport authorities. He should be in the possession of a Bachelors Degree in electronics and should reside in Holland.

He will report to the Sales Manager and will be supported by a good team of qualified System Engineers at the Headquarters in Amsterdam. English is the working language.

To the right applicant we offer an excellent salary and working conditions. For any further information, please write to: Raytheon International Data Systems, for the attention of Mr. J.O. Verschuur, 53 Spaklerweg Amsterdam, The Netherlands.

Raytheon International Data Systems, 53 Spaklerweg, Amsterdam, The Netherlands.

HAYWARDS HEATH SUSSEX COBOL PROGRAMMERS SYSTEMS ANALYST/DESIGNERS

to £5,000 p.a.

Our client is a Company within a large profitable group with long experience in data processing. Applications are general commercial running batch and on-line with some teleprocessing.

Experienced COBOL programmers and Analyst/Designers are required to join a team recently relocated to Haywards Heath. The modern offices are conveniently located close to the railway station which offers frequent fast services to London and Brighton.

Computer Auditor

Salary up to £7,000

We are looking for a Computer Auditor who is able to make an immediate contribution to the Audit of both current computer systems and major systems developments. Our Computer Auditor may well have a recognised accountancy qualification and will certainly have relevant experience in the D.P. Audit field. The job demands a self-starter who is capable of working with the minimum of supervision. Initially the job will be based in London but will move to Chatham late 1978 on completion of our new administrative building.

Salary in the £6,000 - £7,000 range. Fringe benefits are excellent and include a non-contractual annual bonus, non-contributory pension scheme and life assurance cover.

Assistance will be given with relocation costs where appropriate.

Applicants should send details of career to date to:

H. F. Hughes,
Personnel Manager,
Corporation of Lloyd's,
Lime Street,
London, EC3M 7HA.
01-623 7100 Ext. 2550

BECOME A TECHNICAL JOURNALIST

ON

COMPUTER WEEKLY

We are looking for writers to join the successful and experienced team on Computer Weekly.

Essential qualities are proven computer experience or a qualification in computer-related studies, plus the ability to write quickly, accurately and clearly to meet strict deadlines.

People with operations experience and/or an in-depth software background will be given priority for the current vacancies. However, if your experience falls outside these areas, and you are interested in joining the team, why not contact us?

Writing for Computer Weekly is a job that opens up interesting new career possibilities for DP people. If you think you can meet our standards contact Malcolm Peltu, Editor, Computer Weekly, Dorset House, Stamford Street, London SE1 9LU, giving brief biographical details.

ANALYST PROGRAMMER

AP2/4 £3,021 - £4,184 inclusive plus July 1977 National Pay Award.

Applications are invited from persons with at least two years' programming experience together with some system analysis work.

The duties of the post will include analysing and designing systems and computer programming in R.P.G. II. The Council currently uses an I.C.L. 2903 computer.

The Computer Section is located in Dartford within easy reach of A2/M2 and Dartford British Railway Station (35 minutes London Bridge). A generous disturbance and relocation scheme is in operation.

Further details and application form, returnable by 22nd August, are available from Personnel Section, Manor House, Swancombe, Kent DA10 0BS. Tel. Greenhithe 842431, Ext. 27.

Newcastle-upon-Tyne

WORCESTERSHIRE SYSTEMS AND PROGRAMMING OPPORTUNITIES SALARY UP TO £5,500 P.A.

We have been retained to recruit Systems Analysts and Programmers for our client, a manufacturing based organisation and a market leader in its particular field. Based around sophisticated ICL equipment, their systems development plans are both ambitious and technically advanced and they

are utilising COMMUNICATIONS MANAGER for their on-line systems development plans, which include a network of terminal links throughout the UK.

SYSTEMS ANALYSTS

Candidates should have:-

- * a minimum of four years' data processing experience in a commercial manufacturing environment
- * taken at least one major system from design through to implementation
- * a minimum of two years' systems experience in an ICL environment
- * ideally, a programming background and experience of communication techniques

* Age range of between 24 and 32 and be educated to degree level

PROGRAMMERS

Candidates should have:-

- * a minimum of two years' ICL COBOL/PLAN experience
- * a desire to continue in the programming field using advanced techniques with the capability of understanding and applying such
- * experience of GEORGE III operating system is desirable but not essential

Successful candidates will be given excellent working conditions, experience of the very latest computing techniques and relocation assistance, if necessary, to an area of low cost housing.

TEST PROGRAMMERS HERTFORDSHIRE SALARY C. £5,000

Experienced programmers are required to work in the Product Test department of our Client's Software Development Headquarters. Main responsibilities will include developing tests and conducting trials of newly developed software prior to general release. The ability to write comprehensive reports and negotiate test objectives is essential.

Candidates should possess a practical approach to problem solving and an appreciation of the eventual users requirements which should reflect in the completed product. Rapid career advancement is envisaged for those with relevant experience waiting to capitalise on their present expertise. For further details please quote CW148.

DEVELOPMENT PROGRAMMERS

HERTFORDSHIRE SALARY UP TO £6,000

One of the world's leading computer manufacturers is currently recruiting experienced programmers to work on the development of new products within their European Software Development Group. Candidates' experience should stem from a computer manufacturing background with a strong bias towards assembly level programming. A working knowledge of Disc based systems plus some communications experience would be a decided advantage.

This is a unique opportunity to join a rapidly expanding department where you can develop your talents to the limit. Career prospects are excellent within the department. For further details please quote CW149.

SOFTWARE CONSULTANTS (1903 going to 2960)

ESSEX C. £6,000

A leading manufacturer of precision engineering products is currently seeking a software specialist with at least five years' experience in systems programming.

The person appointed will report to the C.S.M. and be responsible for software evaluation, software planning and maintenance and also the training of systems and programming staff in current software developments.

The company has plans to develop extensive real-time systems for its commercial and manufacturing activities. An ICL 2960 will be installed in a new computer suite towards the end of 1978 to support these developments and will utilise VME/B TPS 1800 and DME.

Current systems are based on an ICL 1903A running under GII+. This is an ideal opportunity for someone who wants direct involvement in the software activities associated with a large scale real-time system.

For further details please quote CW150.

TECHNICAL WRITERS HERTFORDSHIRE SALARY UP TO £5,500

Does your talent lie within the production of technical specifications and software manuals? If so, or even if you have two years' solid experience in a technical area, our client would like to meet you and perhaps offer you a more promising career.

Firstly, there are one or two qualifying factors. The Organisation concerned is a manufacturer of intelligent terminals and computer peripherals who strongly believe that the biggest asset in the employee is his ability to write clearly and effectively. This healthy working environment produces one of the finest products around, which gives you a fine opportunity for career progression with exceptional security.

Our client need for people with the right personality to tackle and solve all manner of problems in close association with the software design and product development. This is a highly responsible and highly rewarding role, with the opportunity to progress to a high level of responsibility in a very short time. For further details please quote CW151.

Review Analyst for International Bank

Morgan Guaranty, one of America's leading banks is seeking a review analyst to work in its new administrative headquarters in Stratford, E15.

The position involves working at project leader level on the quality assurance team in the growing computer department which is currently working on a major automation project.

The resulting integrated systems, which will be implemented in phases over the next few years, cover all aspects of banking activity including Loans, Deposits, Foreign Exchange and Securities, and incorporate an on-line data entry and dealers enquiry system with many terminals.

The successful applicant will be an experienced analyst with particular knowledge of banking or financial systems, user liaison, inspection techniques and

systems reliability techniques. He or she will play a monitoring role in all stages of systems development. Thus a realistic approach plus the ability to communicate will be valued.

The Bank pays particular attention to career development and provides both in-house and external training facilities.

An attractive salary will be paid reflecting the importance of this post. In addition, there are excellent fringe benefits which include an annual bonus, low-cost mortgages, non-contributory pension and life assurance and a staff restaurant.

Please write, giving details of career to date or telephone for an application form to Mr R. Binham, Morgan Guaranty Trust Company of New York, Morgan House, Stratford Centre, Stratford, London E15 1XB. Telephone 01-555 3111

OPERATOR WITH MORE TO OFFER?

If you feel that you are capable of more than just operating then you may be the Operations Assistant we are looking for. As part of a small but rapidly developing department you will immediately be involved in all aspects of the operation of our IBM System 3 Model 8 installation. In addition you will be expected to become rapidly proficient as an active R.P.G.II programmer.

If you are suited to the responsibility and opportunity offered, write giving details of career to date, to: R. J. Viven, Systems Manager, Lonsdale Ltd., P.O. Box 79, 207 Anerley Road, London SE20 8EW.

Computer Operator

Due to an increase in our computing activity we need an ambitious operator with at least two years' experience of ICL 1800 series (George II) or 2903 (Bee 1) to join our small team of professional operators operating a 24K 2903 with FEOS and EOS 305.

The computer operation is expanding and is expected to move to a 2 shift system later this year with generous allowances.

We offer excellent holiday entitlement, free life assurance, sick benefit and pension scheme, as well as an attractive salary for the right candidate.

Write for an application form to: Personnel Dept., Dexion Ltd., Maylands Avenue, Hemel Hempstead, Herts, or phone Clive Wells on Hemel Hempstead 2361.

SW HERTS Senior Systems Analyst

£5,500 - £6,000

This is an opportunity to join the Management Services Division of a large, successful manufacturing and distribution enterprise, and to work to good professional standards in a well-established data processing environment.

Clear prospects and job interest are good, due to a challenging schedule of development work and the implementation of further on-line systems. Employment conditions are excellent, and relocation expenses will be met where appropriate. No significant travel is required.

The opening will interest Analysts with:

- several years' sound analysis experience and the competence to design and implement effective business systems
- the ability to communicate convincingly
- a good educational background — at least "A" level.

*Should your systems analysis experience be less than that implied by the above salary bracket, we would still like to hear from you, as our clients have a further opening at Systems Analyst level, due to a promotion.

For an initial confidential discussion on the career opportunity, please ring us, quoting Ref. 707, or write briefly.

SYSTEMS ANALYSTS

If you are looking for an opportunity to join a team of top class professionals involved on a wide variety of commercial applications in Edinburgh then you may be the person we wish to recruit.

You will have a University Degree or equivalent professional qualification, together with a minimum of 3 years experience, including programming, plus proven achievement in the investigation, design and implementation of commercial systems.

Commanding salary including supplements will be not less than £4,500

The Division pursues a progressive staff training and development policy. Benefits include a non-contributory pension scheme, 22 days holiday leave, flexible working hours and (where appropriate) House Purchase Facilities.

In the first instance, please write or telephone for an application form to: Mrs. M.C. Pinkerton, Assistant Staff Controller, Bank of Scotland, 2 Robertson Avenue, EDINBURGH, EH11 1PZ. Telephone: 031-337 2488 (Extension 188)

Technical Author with computer experience? There's a place for you in Paris

We're a major international computer manufacturer based in Paris and are at present looking for additional enthusiastic and ambitious Technical Authors to join our Publications team.

We need people with both sound writing ability and a good relevant technical background and as a wide variety of computer documentation is involved, you should already be a professional writer in the computer industry or, alternatively, have computer experience at analyst/programmer level and be interested in technical authorship.

Salaries are highly competitive and there is an attractive range of benefits of the kind you would associate with a large international company. We will, of course, assist with relocation expenses to Paris. In the first instance, send your career resume to Position No. 1011 0228, Austin Knight Limited, London W1A 1JSE. Applications are forwarded to the client concerned, therefore companies in which you are not interested should be listed in a covering letter to the Position Number Supervisor.

Systems Analysts and Programmers

— this could be the start of something big!

At the Nestlé's Production Unit in Hayes we are in the process of developing a comprehensive new Factory Support system. We are phasing out our present 1901 and replacing it by the use of a 360/50, 370/136 at our Croydon head office linked to Datapoint 2200 mini-computers at production centres.

We're looking for staff to join us at the initial stage to help establish the system and to develop and grow with it.

If you have an interest in Real Time or Teleprocessing and experience in COBOL we would like to discuss the future with you.

The factory is based in Hayes close to the M4 and the attractive benefits include an attractive pension and life assurance scheme, subsidised canteen, staff canteen shop selling a wide range of foods and an active sports and social club. Join us now and you'll be joining at a very interesting time so why not give us a call and find out more. Contact David Taylor at the address below:

Systems Analyst (E.D.P.)

Edmundson Electrical Limited, a member of the Chertolhouse Group, is a major force in the distribution and sale of industrial and domestic electrical products within the UK, employing 800 people at 38 locations and pursuing an active growth policy.

We are now seeking an experienced and energetic Systems Analyst to join the E.D.P. department based at our headquarters in the centre of Knaiford.

The person we are looking for will be aged 25-40, educated to a minimum GCE 'A' level or equivalent and have had 4-5 years' computing experience of which a considerable amount should have been in programming or systems, in a responsible role.

Duties will include designing, testing and implementing new and revised systems and instructing users in the scope and use of systems facilities, as well as Systems Support and Maintenance.

The successful male or female applicant will be responsible to the Systems Manager and will receive an attractive salary and conditions of employment.

Extending holiday arrangements will be honoured.

Please write giving brief details or telephone now for an application form to:

S. Clarke, Esq.,
Personnel Executive,
Edmundson Electrical Limited,
P.O. Box 10, Knaiford, Cheshire WA16 6AY.
Telephone: Knaiford 3811.

Edmundson Electrical Ltd.
A MEMBER OF THE CHERTOLHOUSE GROUP

ELECTRONIC ENGINEER

to join a Technical Manager designing our product range in CCTV Cameras and associated equipment. VDU and Microprocessors. A sound knowledge of both analogue and digital circuitry together with practical ability is essential. Salary is negotiable up to £3,200 p.a. dependent upon qualifications and experience.

Apply to: Creflon Electronics Ltd., 38 Grosvenor Road, Twickenham, Middlesex TW1 4AD.

THE UNIVERSITY OF BATH DATA PROCESSING OFFICER

A person with extensive all round computer experience is required to manage the University Administration's Data Processing department. The computer configuration consists of a Burroughs B1728 central processor, tape, disk card reader, line printer, mini computer, VDU, and Coda 2 Card readers. Financial, student records and library circulation procedures are currently computerised but there is scope for considerable development.

The successful candidate will need to demonstrate the ability to effectively communicate with all levels of management, undertake systems design work and project control responsibilities. A sound background in COBOL is essential.

The salary scale is under review but the successful candidate will be in the upper part of the range which is currently £2,004.25 to £2,827.

Applications, giving the names and addresses of two referees, should be sent to the Personnel Officer, University of Bath, Bath BA2 7AY, by 31st August. Reference number 77/85050.

Puzzle answer

STRANGELY ENOUGH the ratio is involved in the solution to this problem. The probability that any given needle will come to rest lying across one of any given set of regularly spaced parallel lines can be determined from the fraction (2 x needle length) / (pi x line spacing).

In our particular case length of needle is 2 cm, spacing of lines is 2 cm.
